VERA'S FLAVOR

독해 BRIDGE

2026 EDITION

Vera's Flavor

[지문 1]

CRISPR-Cas9 is a revolutionary gene-editing technology that has transformed biological research. Often described as "molecular scissors," it allows scientists to make precise changes to the DNA of organisms. The system consists of two key components: the Cas9 enzyme, which cuts the DNA, and a guide RNA, which directs the Cas9 to a specific location in the genome. This precision has opened up possibilities for correcting genetic defects, treating diseases, and improving crops. However, the power of CRISPR-Cas9 also raises significant ethical dilemmas. The most contentious issue is its potential use in human germline editing—making changes to eggs, sperm, or embryos. Such alterations would be heritable, meaning they would be passed down to future generations. This capability prompts profound questions about designing future humans and the potential for unforeseen long-term consequences, creating a deep divide in the scientific and ethical communities.

Vocabulary

- revolutionary 획기적인, 혁명적인
- contentious 논쟁을 초래할
- heritable 유전될 수 있는
- dilemma 딜레마, 진퇴양난

1-1 What is the primary function of the CRISPR-Cas9 system described in the passage?

① To create new organisms from scratch

② To act as a precise tool for editing DNA

③ To exclusively diagnose genetic diseases

④ To clone organisms for agricultural purposes

⑤ To analyze the entire human genome sequence

1-2 According to the passage, what is the most significant ethical concern associated with CRISPR-Cas9?

① The high cost of the technology for public use

② The potential for accidental release of modified organisms

③ The possibility of making heritable changes to human DNA

④ The risk of the Cas9 enzyme cutting the wrong DNA sequence

⑤ The intellectual property disputes among scientists

1-3 Which of the following statements is NOT true according to the passage?

① The Cas9 enzyme is responsible for cutting the DNA.

② Guide RNA helps direct the Cas9 enzyme to a specific target.

③ CRISPR-Cas9 technology is only used for improving crops.

④ Changes made through human germline editing can be inherited.

⑤ The use of CRISPR-Cas9 has sparked debate in the scientific community.

[지문 2]

Marine microplastics are tiny plastic particles, less than five millimeters in size, that pose a significant threat to aquatic ecosystems. They originate from two main sources. Primary microplastics are intentionally manufactured small, such as microbeads in cosmetics or plastic pellets used in industrial manufacturing. Secondary microplastics, on the other hand, result from the breakdown of larger plastic debris, like bottles and bags, through exposure to sun and wave action. Once in the ocean, these particles are ingested by marine life, from plankton to whales. This is problematic not only because the plastics themselves can cause physical harm, but also because they can absorb and concentrate toxic pollutants from the surrounding water. As smaller organisms are eaten by larger ones, these plastics and associated toxins move up the food chain, a process known as bioaccumulation. This ultimately poses a potential risk to human health through the consumption of contaminated seafood.

Vocabulary

- aquatic 수생의, 물의
- ingest 섭취하다
- pollutant 오염물질
- bioaccumulation 생물 농축

2-1 What is the main topic of the passage?

① The process of recycling large plastic debris

② The chemical composition of different types of plastic

③ The sources and ecological impact of marine microplastics

④ The benefits of using microbeads in cosmetic products

⑤ The regulations governing industrial plastic waste

2-2 According to the passage, what is a defining characteristic of secondary microplastics?

① They are deliberately manufactured to be small.

② They are formed from the degradation of larger plastic items.

③ They are mainly found in cosmetic products like face wash.

④ They are less harmful to marine life than primary microplastics.

⑤ They cannot absorb toxins from the water.

2-3 What does the process of "bioaccumulation" described in the passage lead to?

① The breakdown of microplastics into harmless substances

② The concentration of plastics and toxins in organisms higher up the food chain

③ The creation of new primary microplastics in the ocean

④ The immediate death of plankton that ingest plastic

⑤ The removal of toxic pollutants from the ocean water

[지문 3]

The rise of single-person households is a significant demographic shift reshaping societies worldwide. This trend is driven by various factors, including delayed marriage, an aging population, and a greater emphasis on individual careers and independence. Economically, this shift has fueled the growth of the "solo economy," with businesses catering specifically to individuals. This includes smaller-sized appliances, single-serving food packages, and housing designed for one. However, this societal transformation also presents challenges. On a social level, there is a growing concern about increased loneliness and social isolation, which can have negative impacts on mental and physical health. Furthermore, the demand for more housing units puts pressure on urban infrastructure and can lead to higher housing costs. Governments and communities are now grappling with how to support the well-being of a growing population of single dwellers while managing the broader economic and social consequences.

Vocabulary

- demographic 인구 통계의
- cater to ~의 요구를 맞추다
- grapple with ~을 해결하려고 노력하다

3-1 According to the passage, what is a major economic consequence of the increase in single-person households?

① A decline in the overall consumer market

② The development of a "solo economy"

③ A decrease in the price of urban housing

④ Reduced demand for home appliances

⑤ A shift towards rural living

3-2 Which of the following is mentioned in the passage as a social challenge related to this trend?

① A decrease in educational attainment

② A rise in unemployment rates

③ Increased loneliness and social isolation

④ A decline in technological innovation

⑤ A reduction in public transportation use

3-3 The passage states that all of the following are factors contributing to the rise of single-person households EXCEPT:

① People getting married later in life

② A growing focus on personal independence

③ An increase in the number of elderly people

④ The expansion of suburban areas

⑤ People prioritizing their professional lives

[지문 4]

The subscription economy has fundamentally altered how consumers access goods and services, shifting from a model of one-time ownership to one of recurring access. Companies in various sectors, from entertainment and software to food and fashion, have embraced this model, drawn by the promise of predictable, recurring revenue and deeper customer relationships. For consumers, subscriptions can offer convenience, variety, and often lower upfront costs. However, the long-term sustainability of this model is facing scrutiny. A key challenge is "subscription fatigue," where consumers feel overwhelmed by the number of services they pay for monthly and begin to cancel non-essential ones. Furthermore, intense market competition forces companies to constantly innovate and provide value to prevent customer churn. As the market becomes more saturated, only those companies that can maintain a strong, unique value proposition will likely thrive in the long run.

Vocabulary

- recurring 반복되는, 순환하는
- sustainability 지속 가능성
- scrutiny 정밀 조사
- churn 고객 이탈

4-1 What is the core principle of the subscription economy model as described in the passage?

① Selling products with a lifetime warranty

② Focusing on single, high-value transactions

③ Providing recurring access to services for a regular fee

④ Encouraging customers to purchase products in bulk

⑤ Offering products exclusively through physical stores

4-2 What does the term "subscription fatigue" refer to in the passage?

① Customers feeling tired from using a service too much

② Companies struggling to create new subscription services

③ Consumers feeling overwhelmed by too many monthly payments

④ A decline in the quality of subscription-based products

⑤ The technical difficulty of managing multiple subscriptions

4-3 According to the passage, why are companies attracted to the subscription model?

① It eliminates the need for customer service.

② It allows them to sell products at a much higher price.

③ It requires less marketing and innovation.

④ It provides a stable and predictable source of income.

⑤ It is less competitive than traditional business models.

[지문 5]

Minimalist architecture is a design philosophy that advocates for reducing buildings to their essential elements. Often summarized by the motto "less is more," its core principle goes beyond mere simplicity. It is an aesthetic that emphasizes open, light-filled spaces, clean lines, and a focus on the pure form and material of the structure. Minimalist architects meticulously consider every detail to create a sense of order and tranquility. They often use a limited palette of materials, such as concrete, glass, and steel, to highlight their inherent qualities and textures. The goal is not to create a cold or empty environment, but rather to remove distractions and foster a deeper connection between the inhabitant, the space, and the natural surroundings. By stripping away the non-essential, minimalist architecture aims to achieve a clarity and serenity that enriches the human experience within the built environment.

Vocabulary

- advocate 옹호하다
- meticulously 꼼꼼하게
- tranquility 평온
- serenity 맑음, 평온

5-1 What is the primary goal of minimalist architecture, according to the passage?

① To build structures as cheaply as possible

② To create complex and highly decorated buildings

③ To reduce a building to its essential components to achieve serenity

④ To use a wide variety of bright colors and materials

⑤ To prioritize the quantity of rooms over their quality

5-2 Which of the following is NOT mentioned as a characteristic of minimalist architecture?

① The use of ornate and decorative elements

② An emphasis on open, light-filled spaces

③ The use of a limited selection of materials

④ A focus on clean lines and pure forms

⑤ The intention to create a sense of tranquility

5-3 The passage suggests that minimalist architecture aims to enhance the human experience by...

① providing more storage space for personal belongings.

② incorporating the latest smart home technology.

③ removing unnecessary elements to reduce distractions.

④ making buildings look identical to each other.

⑤ using materials that are easy to clean.

[지문 6]

The decipherment of the Rosetta Stone was a monumental breakthrough in the field of Egyptology. Discovered in 1799 by French soldiers in Egypt, the stone is a fragment of a larger stele inscribed with a decree issued in 196 BC. Its immense importance lies in the fact that the decree is written in three different scripts: Egyptian hieroglyphs, used for priestly documents; Demotic script, the common script of ancient Egypt; and Ancient Greek, which was the language of the administration. Since Ancient Greek was well understood by scholars, the stone provided a key to unlocking the meaning of the other two unknown scripts. The final breakthrough came in the 1820s, largely thanks to the brilliant work of the French scholar Jean-François Champollion. He correctly deduced that hieroglyphs were not purely symbolic but represented a complex system of alphabetic and syllabic sounds, paving the way for the translation of countless other ancient Egyptian texts.

Vocabulary

- decipherment 해독
- monumental 기념비적인, 엄청난
- stele 석비
- deduce 추론하다

6-1 What was the primary reason for the Rosetta Stone's importance?

① It was the oldest artifact ever discovered in Egypt.

② It was made of a rare and valuable type of stone.

③ It contained a decree from a very famous pharaoh.

④ It presented the same text in three different scripts, one of which was known.

⑤ It was the first time Demotic script had ever been found.

6-2 Who is credited in the passage with making the final breakthrough in deciphering Egyptian hieroglyphs?

① An anonymous French soldier

② A group of Greek scholars

③ An ancient Egyptian priest

④ Jean-François Champollion

⑤ The ruler who issued the decree

6-3 According to the passage, Champollion's key insight was that hieroglyphs were...

① a system representing a combination of sounds.

② purely symbolic pictures of objects.

③ a less complicated version of Demotic script.

④ only used for recording financial transactions.

⑤ a direct translation of the Ancient Greek alphabet.

[지문 7]

The Dunning-Kruger effect is a cognitive bias in which people with low ability or knowledge in a particular domain tend to overestimate their competence. This psychological phenomenon occurs because the very skills required to perform a task well are often the same skills needed to recognize one's own deficiencies. In other words, incompetent individuals lack the metacognitive ability to realize how poorly they are performing. Conversely, the effect also describes a related bias where highly competent individuals may underestimate their relative ability. Experts, finding tasks easy for themselves, often assume that those tasks are also easy for others, leading them to misjudge their own level of expertise compared to the general population. This dual-faceted bias highlights the complex relationship between self-perception and actual ability, reminding us that confidence is not always a reliable indicator of skill.

Vocabulary

- cognitive bias 인지 편향
- competence 능력, 역량
- metacognitive 초인지의
- conversely 정반대로

7-1 What is the central idea of the Dunning-Kruger effect as described in the passage?

① People with high ability always have high confidence.

② Confidence is the most important factor for success.

③ Individuals with low competence often overestimate their skills.

④ Experts are unable to teach their skills to others.

⑤ Most people can accurately assess their own abilities.

7-2 According to the passage, why do highly competent individuals sometimes underestimate their ability?

① They suffer from a lack of confidence in general.

② They believe that tasks they find easy are also easy for everyone else.

③ They are not interested in comparing themselves to others.

④ They lack the metacognitive skills to evaluate their performance.

⑤ They are often criticized by those with lower abilities.

7-3 The passage implies that the Dunning-Kruger effect is a problem related to...

① emotional intelligence.

② long-term memory.

③ social conformity.

④ self-awareness.

⑤ creative thinking.

[지문 8]

The human body is home to a vast and complex community of microorganisms, collectively known as the human microbiome. This community, which includes bacteria, viruses, and fungi, outnumbers our own human cells by some estimates. For a long time, these microbes were primarily viewed through the lens of disease. However, modern research has revealed a much more nuanced picture, highlighting a symbiotic relationship that is crucial for our health. These microorganisms play a vital role in essential bodily functions, such as digesting food that our bodies cannot break down on their own, producing essential vitamins, and regulating our immune system. They train the immune system to distinguish between friendly microbes and harmful pathogens. The balance of this internal ecosystem is delicate, and disruptions to the microbiome have been linked to a range of health issues, from digestive disorders to autoimmune diseases.

Vocabulary

- microorganism 미생물
- nuanced 미묘한 차이가 있는
- symbiotic 공생의
- pathogen 병원균

8-1 What is the main purpose of the passage?

① To warn about the dangers of all bacteria in the human body

② To explain the concept and importance of the human microbiome

③ To provide a list of diseases caused by viruses and fungi

④ To describe how to eliminate all microorganisms from the body

⑤ To compare the human microbiome with that of other animals

8-2 According to the passage, what is one of the key functions of the microbiome?

① It helps in the development of human cells.

② It produces all the energy required by the body.

③ It assists in breaking down certain foods and regulating immunity.

④ It is solely responsible for causing autoimmune diseases.

⑤ It protects the body by attacking all foreign microbes without distinction.

8-3 Which of the following statements is true about the human microbiome, according to the passage?

① It consists only of bacteria.

② The number of microbial cells is less than the number of human cells.

③ A healthy microbiome has a symbiotic relationship with the human body.

④ The microbiome's primary function is to cause disease.

⑤ The composition of the microbiome is permanent and never changes.

[지문 9]

Decentralized Finance, or DeFi, represents a paradigm shift in the financial world, leveraging blockchain technology to create an open and permissionless financial system. Unlike traditional finance, which relies on central intermediaries like banks, brokerages, and exchanges, DeFi applications run on public blockchains, primarily Ethereum. These applications, often called "dapps," aim to replicate and improve upon traditional financial services such as lending, borrowing, trading, and insurance. The core appeal of DeFi is its accessibility; anyone with an internet connection can access these services without needing approval from a central authority. This has the potential to foster greater financial inclusion. However, the DeFi space is still in its early stages and carries significant risks, including smart contract vulnerabilities, market volatility, and regulatory uncertainty. While its proponents envision a more transparent and efficient financial future, these challenges must be addressed for DeFi to achieve mainstream adoption.

Vocabulary

- paradigm shift 패러다임 전환
- intermediary 중개자
- vulnerability 취약성
- proponent 지지자

9-1 What is the primary goal of Decentralized Finance (DeFi) as described in the passage?

① To strengthen the power of central banks

② To create a financial system that operates without central intermediaries

③ To make cryptocurrency trading illegal

④ To limit financial services to a select group of users

⑤ To replace blockchain technology with a more secure system

9-2 According to the passage, on what technology are most DeFi applications currently built?

① Private corporate servers

② The traditional banking network

③ Government-controlled databases

④ Public blockchains like Ethereum

⑤ Peer-to-peer file-sharing networks

9-3 Which of the following is mentioned as a potential risk associated with DeFi?

① Lack of innovation in the financial sector

② The slow speed of transactions

③ The exclusion of people without bank accounts

④ Vulnerabilities in the underlying smart contracts

⑤ Overly strict government regulations

[지문 10]

The "15-minute city" is an urban planning concept that aims to improve the quality of life by ensuring that all residents can access their daily necessities within a 15-minute walk or bike ride from their homes. This model envisions a city of decentralized, self-sufficient neighborhoods where work, shopping, education, healthcare, and leisure are all conveniently located nearby. The primary goals are to reduce dependency on cars, which in turn cuts down on traffic congestion and carbon emissions, promoting a more sustainable and environmentally friendly lifestyle. Furthermore, by encouraging walking and cycling, the 15-minute city promotes public health and fosters a stronger sense of community as people interact more in their local areas. This approach represents a shift away from the traditional city model, where residential, commercial, and industrial zones are strictly separated, forcing long commutes.

Vocabulary

- urban planning 도시 계획
- decentralized 분산된
- congestion 혼잡
- foster 조성하다, 발전시키다

10-1 What is the central idea of the "15-minute city" concept?

① To build cities where all travel is done by high-speed trains

② To ensure residents can access essential services within a short walk or bike ride

③ To concentrate all commercial activity in a single downtown area

④ To design cities exclusively for remote workers

⑤ To expand highways to reduce traffic congestion

10-2 Which of the following is a primary goal of the 15-minute city model, according to the passage?

① To increase the number of cars on the road

② To separate residential and commercial zones more strictly

③ To reduce reliance on automobiles and promote sustainability

④ To encourage residents to move to rural areas

⑤ To make long-distance commuting more efficient

10-3 The passage suggests that the 15-minute city model enhances community feeling by...

① organizing mandatory neighborhood events.

② providing free public Wi-Fi in all areas.

③ encouraging more local interaction through walking and cycling.

④ building large, centralized community centers.

⑤ implementing a neighborhood surveillance system.

[지문 11]

Educational psychology has been significantly influenced by the concept of the "growth mindset," a term coined by psychologist Carol Dweck. This theory posits that individuals' beliefs about their own intelligence and abilities have a profound impact on their learning and success. People with a growth mindset believe that their talents and intelligence can be developed through dedication and hard work. They see challenges not as insurmountable obstacles but as opportunities for growth. In contrast, those with a "fixed mindset" believe their abilities are innate and unchangeable, which can lead them to avoid challenges and give up easily when faced with setbacks. Research indicates that fostering a growth mindset in students can lead to greater academic achievement, increased motivation, and enhanced resilience. Educators are increasingly adopting strategies to cultivate this mindset in the classroom, encouraging students to embrace effort and view failure as a vital part of the learning process.

Vocabulary

- coined 만들어낸
- posits 상정하다
- insurmountable 극복할 수 없는
- resilience 회복탄력성

11-1 What is the main purpose of the passage?

① To critique Carol Dweck's psychological theories.

② To compare different educational systems around the world.

③ To explain the concept of the growth mindset and its educational benefits.

④ To provide a biography of the psychologist Carol Dweck.

⑤ To argue that intelligence is genetically predetermined.

11-2 According to the passage, how do individuals with a fixed mindset typically react to setbacks?

① They seek out even greater challenges.

② They analyze their mistakes to learn from them.

③ They believe their effort was insufficient.

④ They are more likely to give up without persisting.

⑤ They ask for help from educators and peers.

11-3 Which of the following is NOT mentioned as a benefit of having a growth mindset?

① Improved academic performance.

② A higher level of motivation.

③ Increased ability to cope with difficulties.

④ A guaranteed path to financial success.

⑤ A positive attitude towards challenges.

[지문 12]

The human microbiome, the vast community of microorganisms living in and on our bodies, is a burgeoning field of medical research. For a long time, bacteria were viewed primarily as pathogens, but we now understand that a diverse and balanced microbiome is crucial for health. The gut microbiome, in particular, has received significant attention. It plays a vital role in digesting food, synthesizing essential vitamins, and regulating the immune system. More surprisingly, recent studies have revealed a strong connection between the gut and the brain, often called the "gut-brain axis." This communication pathway suggests that the composition of our gut bacteria can influence our mood, behavior, and even our risk for certain neurological disorders. An imbalance in the gut microbiome, known as dysbiosis, has been linked to conditions like depression and anxiety, highlighting the importance of maintaining a healthy gut environment for overall well-being.

Vocabulary

- burgeoning 급증하는, 급성장하는
- pathogens 병원균
- synthesizing 합성하다
- dysbiosis 장내 세균 불균형

12-1 What is the main topic of the passage?

① The dangers of pathogenic bacteria.

② The process of vitamin synthesis in the body.

③ The importance of the gut microbiome for human health.

④ The history of medical research on microorganisms.

⑤ The link between diet and immune system disorders.

12-2 According to the passage, what is the "gut-brain axis"?

① A surgical procedure to treat digestive issues.

② A dietary plan designed to improve gut health.

③ A communication link between gut bacteria and the brain.

④ A type of beneficial bacteria found in the digestive system.

⑤ A term for the physical structure of the intestines.

12-3 Which of the following is NOT described as a function of the gut microbiome?

① Assisting in the digestion of food.

② Producing essential vitamins for the body.

③ Directly controlling muscle movement.

④ Influencing mood and mental states.

⑤ Helping to regulate the immune system.

[지문 13]

The Renaissance, a fervent period of European cultural, artistic, and intellectual rebirth following the Middle Ages, was largely fueled by the revival of humanism. Originating in 14th-century Italy, humanism was an intellectual movement that emphasized the value and agency of human beings. It marked a significant shift from the medieval scholastic focus on theology and divine matters to a renewed interest in the classical texts and philosophies of ancient Greece and Rome. Humanist scholars, such as Petrarch, believed that the study of classical antiquity—including grammar, rhetoric, history, and moral philosophy—could lead to a more virtuous and well-rounded individual. This anthropocentric worldview celebrated human potential and achievement, profoundly influencing art, literature, politics, and science. By placing humanity at the center of inquiry, humanism laid the essential groundwork for the scientific revolution and the modern age.

Vocabulary

- fervent 열렬한
- revival 부활
- agency 주체성
- anthropocentric 인간중심적인

13-1 What is the central theme of the passage?

① The artistic achievements of the Renaissance.

② The role of humanism in shaping the Renaissance.

③ The political structure of 14th-century Italy.

④ The decline of the medieval scholastic tradition.

⑤ The biography of the humanist scholar Petrarch.

13-2 According to the passage, what was the primary focus of humanist scholars?

① The study of medieval theology and divine law.

② The creation of a new, universal religion.

③ The advancement of modern scientific methods.

④ The rediscovery and study of classical Greek and Roman texts.

⑤ The development of new economic theories.

13-3 The passage suggests that humanism promoted a worldview that was primarily _____.**

① theocentric

② pessimistic

③ anthropocentric

④ dogmatic

⑤ mystical

[지문 14]

The Sapir-Whorf hypothesis, also known as the principle of linguistic relativity, proposes a fascinating relationship between language and thought. In its strongest form, the hypothesis argues that the language we speak determines the way we think and perceive the world. A more moderate and widely accepted version suggests that language influences, rather than determines, our thought processes. For example, some languages have multiple words for different types of snow, which may allow their speakers to perceive and distinguish between these types more readily than speakers of a language with only one word for snow. Similarly, the way a language handles color terms can affect how its speakers categorize and remember colors. While the deterministic version of the hypothesis is largely discredited, the idea that language can shape our cognition and focus our attention on certain aspects of reality continues to be an influential concept in linguistics, psychology, and anthropology.

Vocabulary

- linguistic relativity 언어 상대성
- determines 결정하다
- discredited 신뢰를 잃은
- cognition 인지

14-1 What is the main idea presented in the passage?

① All languages have the same basic structure.

② The Sapir-Whorf hypothesis has been completely proven false.

③ The language one speaks can influence their perception and thought.

④ Learning multiple languages leads to a higher intelligence.

⑤ The vocabulary for colors is universal across all cultures.

14-2 According to the passage, what is the difference between the strong and moderate versions of the Sapir-Whorf hypothesis?

① The strong version focuses on grammar, while the moderate version focuses on vocabulary.

② The strong version claims language determines thought, while the moderate version suggests it influences thought.

③ The strong version is widely accepted, while the moderate version is discredited.

④ The strong version applies only to ancient languages, while the moderate version applies to modern ones.

⑤ The strong version was proposed by Sapir, while the moderate version was proposed by Whorf.

14-3 Which of the following examples is used in the passage to illustrate linguistic relativity?

① The different ways languages form past tense verbs.

② The varying number of words for snow in different languages.

③ The complexity of kinship terms in some cultures.

④ The use of formal and informal pronouns.

⑤ The direction in which a language is written.

[지문 15]

The world of professional sports has been revolutionized by the application of data analytics. Perhaps the most famous example of this shift is the "Moneyball" strategy, popularized by the Oakland Athletics baseball team in the early 2000s. Faced with a severely limited budget, the team's general manager, Billy Beane, abandoned traditional scouting methods that relied on intuition and subjective observations. Instead, he adopted a rigorous statistical approach called sabermetrics to evaluate and recruit players. This method focused on objective, often overlooked, statistics like on-base percentage rather than more conventional metrics like batting average. By identifying undervalued players who were effective according to these advanced metrics, the Athletics were able to assemble a highly competitive team at a fraction of the cost of their rivals. This data-driven approach has since been widely adopted across baseball and other sports, fundamentally changing how teams are built and how strategies are formed on the field.

Vocabulary

- revolutionized 혁신을 일으켰다
- intuition 직관
- sabermetrics 세이버메트릭스
- undervalued 저평가된

15-1 What is the primary subject of the passage?

① The history of the Oakland Athletics baseball team.

② The financial challenges in professional sports.

③ The biography of general manager Billy Beane.

④ The impact of data analytics on sports, exemplified by "Moneyball."

⑤ A comparison of different player evaluation metrics.

15-2 According to the passage, why did the Oakland Athletics adopt the "Moneyball" strategy?

① They wanted to experiment with a new coaching style.

② They were operating with a significant budget constraint.

③ Their traditional scouts had all retired.

④ They were mandated to do so by the league.

⑤ They had a surplus of statistically-minded players.

15-3 Which of the following best describes the core principle of sabermetrics as mentioned in the passage?

① Relying on the experience and intuition of veteran scouts.

② Prioritizing a player's popularity and marketability.

③ Evaluating players based on objective statistical analysis.

④ Building a team with the highest possible payroll.

⑤ Focusing solely on a player's defensive skills.

[지문 16]

Quantum computing represents a paradigm shift from classical computing. While classical computers use bits that can be either a 0 or a 1, quantum computers use quantum bits, or "qubits." The power of a qubit lies in a principle called superposition. Superposition allows a qubit to exist as a 0, a 1, or both simultaneously. This ability to hold multiple values at once grows exponentially with each added qubit. For instance, two qubits can represent four states at the same time, and this computational space doubles with every additional qubit. This massive parallelism is what gives quantum computers the potential to solve certain complex problems, such as factoring large numbers or simulating molecular interactions, that are practically impossible for even the most powerful classical supercomputers. However, maintaining the delicate quantum state of qubits, which is easily disturbed by environmental factors, remains a significant engineering challenge.

Vocabulary

- superposition 중첩
- exponentially 기하급수적으로
- parallelism 병렬성
- delicate 섬세한

16-1 What is the main difference between a classical bit and a qubit?

① Qubits are larger in physical size than classical bits.

② Qubits can only represent the value 0, not 1.

③ Qubits can exist in multiple states at once, while bits can only be in one.

④ Qubits are more stable and less prone to errors.

⑤ Qubits are used for data storage, while bits are used for processing.

16-2 According to the passage, what is the principle of superposition?

① The ability of a computer to perform multiple tasks sequentially.

② A method for cooling computer components to absolute zero.

③ The phenomenon where a qubit can be in a combination of states simultaneously.

④ A mathematical algorithm for factoring large numbers.

⑤ The process of linking multiple classical computers together.

16-3 What does the passage identify as a major obstacle in developing quantum computers?

① The high cost of manufacturing qubits.

② The difficulty in maintaining the stability of quantum states.

③ The lack of problems that quantum computers can solve.

④ The slow processing speed of individual qubits.

⑤ The ethical concerns surrounding quantum technology.

[지문 17]

Rewilding is an ambitious conservation strategy that aims to restore and protect natural processes and wilderness areas. Unlike traditional conservation, which often focuses on preserving specific species in isolation, rewilding seeks to restore entire ecosystems to a more self-regulating state. A key component of this approach is often the reintroduction of keystone species—animals that have a disproportionately large effect on their environment relative to their abundance. The reintroduction of gray wolves to Yellowstone National Park in 1995 is a classic example. The wolves, as apex predators, controlled the elk population. This led to a cascade of positive effects: overgrazed vegetation began to recover, which in turn stabilized riverbanks and provided habitats for birds and beavers. The return of the wolves demonstrates how reintroducing a single keystone species can trigger a large-scale ecological restoration, making the ecosystem more resilient and biodiverse.

Vocabulary

- rewilding 재야생화
- keystone species 핵심종
- disproportionately 불균형적으로
- cascade 연쇄

17-1 What is the primary goal of rewilding as described in the passage?

① To create more national parks for tourism.

② To study the behavior of specific endangered species.

③ To restore ecosystems to a self-sustaining condition.

④ To eliminate all human intervention in nature.

⑤ To focus conservation efforts on plant life only.

17-2 According to the passage, what is a "keystone species"?

① The most numerous species in an ecosystem.

② A species that has a very significant impact on its environment.

③ A species that has been newly discovered by scientists.

④ The first species to be protected by conservation laws.

⑤ A species that is easy to reintroduce into the wild.

17-3 What was a direct consequence of reintroducing wolves to Yellowstone National Park?

① A decrease in the park's biodiversity.

② An increase in the population of elk.

③ The complete disappearance of beavers.

④ The recovery of vegetation previously overgrazed by elk.

⑤ The drying up of the park's rivers.

[지문 18]

Post-Impressionism was not a unified movement but rather a term for the diverse artistic styles that emerged in the wake of Impressionism, from about 1886 to 1905. While Impressionists like Monet focused on capturing the fleeting effects of light and atmosphere in a naturalistic way, Post-Impressionists felt this approach was too restrictive. They sought to infuse their work with more personal emotion, symbolic meaning, and formal order. Artists such as Vincent van Gogh used vibrant, swirling brushstrokes and intense colors to express his inner turmoil, moving beyond mere visual representation. Paul Cézanne, on the other hand, concentrated on the underlying structure and geometry of his subjects, aiming to "make of Impressionism something solid and durable, like the art of the museums." These artists, while stylistically different, shared a common desire to extend the boundaries of art beyond the objective observation of the Impressionists, paving the way for modern art movements like Cubism and Fauvism.

Vocabulary

- unified 통일된
- fleeting 덧없는, 순식간의
- infuse 불어넣다
- turmoil 혼란

18-1 What is the main purpose of the passage?

① To argue that Impressionism is superior to Post-Impressionism.

② To provide a detailed biography of Vincent van Gogh.

③ To explain the characteristics of Post-Impressionism and its departure from Impressionism.

④ To list all the artists associated with the Post-Impressionist movement.

⑤ To describe the techniques used in creating museum-quality art.

18-2 According to the passage, how did Paul Cézanne's artistic goals differ from those of the Impressionists?

① He focused on capturing fleeting moments of light.

② He used color to express intense personal emotions.

③ He sought to emphasize the underlying structure and form of subjects.

④ He painted exclusively historical and mythological scenes.

⑤ He rejected the use of oil paints in favor of watercolors.

18-3 Which of the following is stated as a commonality among Post-Impressionist artists?

① They all used the same swirling brushstroke technique.

② They all belonged to a formal, organized artistic group.

③ They shared a desire to go beyond the limits of Impressionism.

④ They focused exclusively on painting natural landscapes.

⑤ They rejected the use of symbolic meaning in their art.

[지문 19]

Behavioral economics challenges the classical economic assumption that humans are perfectly rational decision-makers. One of the cornerstone concepts in this field is "loss aversion," a cognitive bias identified by psychologists Daniel Kahneman and Amos Tversky. Loss aversion describes the human tendency to feel the pain of a loss more powerfully than the pleasure of an equivalent gain. For example, most people would feel more distress from losing $100 than they would feel happiness from finding $100. This psychological phenomenon means that people are often more motivated to avoid a loss than to acquire a gain. This bias has significant implications in various domains, including finance, marketing, and public policy. For instance, framing a choice as a way to "avoid a surcharge" is often more effective than framing it as a way to "get a discount," even if the financial outcome is identical. Understanding loss aversion helps explain why people might make seemingly irrational choices, such as holding onto losing stocks for too long.

Vocabulary

- rational 합리적인
- loss aversion 손실 회피
- implications 함의, 영향
- surcharge 추가 요금

19-1 What is the main topic of the passage?

① The principles of classical economics.

② A biography of Daniel Kahneman and Amos Tversky.

③ The concept of loss aversion in behavioral economics.

④ Strategies for successful stock market investing.

⑤ The role of happiness in financial decisions.

19-2 According to the passage, loss aversion is the tendency to _____.**

① prefer smaller, certain gains over larger, uncertain ones.

② feel the negative impact of a loss more strongly than the positive impact of a similar gain.

③ irrationally sell winning stocks too early.

④ avoid all forms of financial risk.

⑤ make decisions based purely on rational calculation.

19-3 Which of the following is presented as a real-world application of loss aversion?

① Offering a discount for early payment.

② Advertising a product's new and improved features.

③ Framing a price difference as a surcharge to be avoided.

④ Creating a complex investment portfolio to diversify risk.

⑤ Providing customers with detailed statistical information.

[지문 20]

In sociology, "social capital" refers to the value derived from social networks and the norms of reciprocity and trustworthiness that arise from them. Unlike financial capital (money) or human capital (skills and knowledge), social capital is embedded in the relationships among individuals. It facilitates cooperation and allows communities to resolve collective problems more effectively. For example, a close-knit neighborhood where people trust each other is rich in social capital. Residents might be more willing to watch over each other's homes or organize a community clean-up day. This collective resource can provide individuals with access to information, opportunities, and emotional support that they might not have otherwise. While often beneficial, social capital can also have a downside, such as when strong in-group loyalty leads to the exclusion of outsiders. Nevertheless, it is widely regarded as a crucial ingredient for a healthy civil society and a thriving economy.

Vocabulary

- reciprocity 상호성, 호혜
- embedded 내재된
- facilitates 용이하게 하다
- exclusion 배제

20-1 What is the best title for the passage?

① The Downside of Strong Communities

② Financial Capital vs. Human Capital

③ Understanding the Concept of Social Capital

④ How to Build a Close-Knit Neighborhood

⑤ The History of Sociological Theories

20-2 According to the passage, where is social capital located?

① In individual bank accounts.

② In educational qualifications and skills.

③ In government institutions and laws.

④ In the relationships and networks between people.

⑤ In the physical infrastructure of a community.

20-3 Which of the following is NOT mentioned in the passage as a potential benefit of social capital?

① Easier resolution of community problems.

② Increased access to job opportunities.

③ A guaranteed increase in personal income.

④ Willingness of community members to cooperate.

⑤ Access to emotional support from others.

[지문 21]

Quantum computing represents a monumental leap in processing power, fundamentally different from classical computers. While classical computers use bits, which can be either a 0 or a 1, quantum computers use qubits. A qubit can exist as a 0, a 1, or a superposition of both simultaneously. This allows quantum computers to perform a vast number of calculations at once. This capability, however, poses a significant threat to modern cryptography. Many current encryption systems, such as RSA, rely on the difficulty of factoring large numbers, a task that would take classical computers millennia to solve. However, a sufficiently powerful quantum computer running Shor's algorithm could break this encryption in a matter of hours. In response, researchers are actively developing "quantum-resistant cryptography," new encryption methods designed to be secure against attacks from both classical and quantum computers.

Vocabulary

- monumental 기념비적인
- cryptography 암호 기술
- millennia 수천 년
- resistant 저항하는

21-1 According to the passage, what is the primary threat posed by quantum computing?

① It consumes significantly more energy than classical computers.

② It could render current data encryption methods obsolete.

③ It is too complex for most researchers to operate.

④ It may lead to the creation of uncontrollable artificial intelligence.

⑤ It relies on algorithms that are not yet fully understood.

21-2 Which of the following is NOT mentioned as a characteristic of a qubit?

① It is the basic unit of quantum information.

② It can exist in a state of superposition.

③ It can represent both 0 and 1 at the same time.

④ It processes information much slower than a classical bit.

⑤ It is used in quantum computers instead of classical bits.

21-3 What is being developed to counter the security risk described in the passage?

① A more powerful version of the RSA encryption system.

② An international ban on the development of quantum computers.

③ A new type of algorithm called Shor's algorithm.

④ Encryption methods that are secure against quantum attacks.

⑤ A global network to monitor quantum computing activities.

[지문 22]

A keystone species is an organism that helps define an entire ecosystem. Without its keystone species, the ecosystem would be dramatically different or cease to exist altogether. A classic example is the sea otter in the North Pacific. These marine mammals are crucial predators of sea urchins. Sea urchins, if left unchecked, graze voraciously on kelp, destroying the kelp forests that provide essential habitat and food for a wide array of other species. By keeping the sea urchin population in control, sea otters ensure the health and stability of the kelp forests. This creates a cascading effect, supporting the biodiversity of the entire coastal ecosystem, from small fish to eagles. The role of the sea otter demonstrates that the importance of a species is not always measured by its abundance, but by its profound impact on its environment.

Vocabulary

- cease 멈추다
- voraciously 게걸스럽게
- array 다수, 집합체
- abundance 풍부함

22-1 According to the passage, what is the main role of sea otters in their habitat?

① They are the primary food source for larger predators.

② They directly help in the growth of kelp by spreading seeds.

③ They compete with sea urchins for kelp as a food source.

④ They maintain the ecosystem's balance by controlling the sea urchin population.

⑤ They are the most abundant species in the North Pacific.

22-2 Based on the information in the passage, what would likely happen if sea otters were removed from the coastal ecosystem?

① The sea urchin population would decrease.

② Kelp forests would likely be destroyed.

③ The overall biodiversity of the area would increase.

④ Small fish would lose their primary predator.

⑤ The coastal ecosystem would remain largely unchanged.

22-3 Which of the following statements about a keystone species is true according to the passage?

① It is always the largest animal in its ecosystem.

② Its importance is determined by its large population size.

③ Its absence can cause a dramatic change in the ecosystem.

④ It primarily helps to build the physical structure of a habitat.

⑤ It is typically a plant, like kelp.

[지문 23]

In urban sociology, the concept of the "third place" is crucial for understanding community life. Coined by sociologist Ray Oldenburg, the term refers to social environments separate from the two usual social environments of home (the "first place") and the workplace (the "second place"). Examples of third places include cafes, libraries, public parks, and community centers. According to Oldenburg, these spaces are vital for civil society, democracy, and civic engagement. They are neutral grounds where people can gather, interact, and build relationships with a wider range of individuals than they might otherwise meet. In these informal settings, conversations are the main activity, fostering a sense of community and belonging. The decline of such places in modern suburban life is often linked to increased social isolation.

Vocabulary

- coined 만들어낸
- vital 필수적인
- neutral 중립적인
- fostering 조성하는

23-1 What is the definition of a "third place" as described in the passage?

① A primary residence where a family lives.

② A formal environment for professional work.

③ A social space distinct from home and work.

④ A virtual community found on the internet.

⑤ A designated area for political protests.

23-2 Which of the following is NOT mentioned in the passage as a function of third places?

① Fostering a sense of community.

② Providing opportunities for formal education.

③ Allowing people to build new relationships.

④ Serving as a neutral ground for social interaction.

⑤ Promoting civic engagement.

23-3 According to the passage, who first introduced the term "third place"?

① A group of urban planners.

② A community center organization.

③ Modern suburban residents.

④ Sociologist Ray Oldenburg.

⑤ A cafe owner's association.

[지문 24]

The traditional economic model is linear, often summarized as "take-make-dispose." Resources are extracted from the earth, manufactured into products, and then thrown away as waste after use. This approach has led to significant resource depletion and environmental pollution. In contrast, the circular economy offers a sustainable alternative. It is a model of production and consumption that is restorative and regenerative by design. The core principles of a circular economy are to design out waste and pollution, keep products and materials in use for as long as possible, and regenerate natural systems. For example, instead of being discarded, a product could be designed for easy repair, reuse, or remanufacturing. This shift aims to decouple economic activity from the consumption of finite resources, creating a more resilient and sustainable future.

Vocabulary

- linear 선형의
- depletion 고갈
- restorative 회복시키는
- decouple 분리하다

24-1 What is the main difference between a linear and a circular economy as stated in the passage?

① Linear economies focus on services, while circular economies focus on goods.

② Linear economies prioritize profit, while circular economies prioritize social welfare.

③ Linear economies follow a "take-make-dispose" pattern, while circular economies aim to eliminate waste.

④ Linear economies are based on renewable resources, while circular economies use finite resources.

⑤ Linear economies are a modern concept, while circular economies are a traditional model.

24-2 According to the passage, which of the following is a key principle of the circular economy?

① Maximizing the extraction of new resources.

② Designing products for a single, short-term use.

③ Keeping materials and products in continuous use.

④ Disposing of all waste in designated landfills.

⑤ Separating economic growth from environmental concerns.

24-3 What is the ultimate goal of the circular economy model described in the text?

① To increase the speed of product manufacturing.

② To create a future that is more sustainable and resilient.

③ To lower the cost of raw materials for businesses.

④ To encourage consumers to buy new products more frequently.

⑤ To move all manufacturing processes overseas.

[지문 25]

The arrival of Japanese Ukiyo-e woodblock prints in Europe during the latter half of the 19th century had a profound impact on the art world. This influx, a result of Japan reopening trade with the West, introduced a radically different aesthetic to European artists. Ukiyo-e prints, with their asymmetrical compositions, sharp outlines, flat areas of vibrant color, and unconventional perspectives, captivated many artists of the Impressionist and Post-Impressionist movements. This influence, termed "Japonisme," is evident in the works of artists like Claude Monet, Edgar Degas, and Vincent van Gogh. They were inspired to break away from the rigid conventions of academic European art, such as linear perspective and modeled shading. Japonisme encouraged them to experiment with new ways of seeing and representing the world, contributing significantly to the development of modern art.

Vocabulary

- profound 심오한
- influx 유입
- asymmetrical 비대칭의
- conventions 관습

25-1 According to the passage, what does the term "Japonisme" refer to?

① A traditional Japanese painting technique.

② The political movement to reopen trade with Japan.

③ The influence of Japanese art on European artists.

④ A collection of Ukiyo-e prints owned by Claude Monet.

⑤ The European style of art that influenced Japan.

25-2 Which of the following is mentioned as a characteristic of Ukiyo-e prints that influenced European artists?

① Symmetrical compositions and soft colors.

② The use of realistic, three-dimensional shading.

③ A focus on historical and religious subjects.

④ Asymmetrical compositions and flat areas of color.

⑤ The exclusive use of black and white ink.

25-3 The passage mentions all of the following artists as being influenced by Japonisme EXCEPT:**

① Claude Monet

② Edgar Degas

③ Leonardo da Vinci

④ Vincent van Gogh

⑤ Artists of the Impressionist movement

[지문 26]

The Silk Road, a network of trade routes connecting the East and West, is renowned for the commerce of goods like silk, spices, and precious metals. However, its historical significance extends far beyond mere trade. It was a vital conduit for cultural, religious, and technological exchange that shaped civilizations for centuries. Along these routes, Buddhism spread from its birthplace in India to China and the rest of East Asia, profoundly influencing the region's spiritual landscape. Similarly, technologies were transmitted across continents. The art of papermaking, a Chinese invention, traveled westward along the Silk Road, eventually reaching the Islamic world and then Europe, where it revolutionized communication and knowledge preservation. Thus, the Silk Road functioned as the world's first great information superhighway, fostering a dynamic interplay of cultures.

Vocabulary

- renowned 유명한
- conduit 도관, 통로
- transmitted 전송된
- interplay 상호작용

26-1 What does the passage state was a primary function of the Silk Road in addition to trade?

① It served as a route for military conquests.

② It was a major channel for cultural and technological diffusion.

③ It was established mainly for diplomatic missions.

④ It was the first paved road connecting Europe and Asia.

⑤ It was primarily used for seasonal migration of peoples.

26-2 According to the passage, which technology was transmitted from China to the West via the Silk Road?

① The magnetic compass.

② Gunpowder.

③ The printing press.

④ Papermaking.

⑤ The production of silk.

26-3 Which of the following is presented in the passage as an example of religious exchange on the Silk Road?

① The spread of Christianity to the East.

② The movement of Islam from Arabia to India.

③ The transmission of Buddhism from India to East Asia.

④ The introduction of Zoroastrianism to China.

⑤ The development of Hinduism in Central Asia.

[지문 27]

The Dunning-Kruger effect is a well-documented cognitive bias in which people with low ability in a specific area tend to overestimate their competence. This paradox occurs because the skills required to perform a task well are often the very same skills needed to accurately evaluate one's own performance and that of others. Lacking this metacognitive ability, incompetent individuals are unable to recognize their own mistakes and shortcomings, leading them to a sense of illusory superiority. Conversely, the bias can also cause highly skilled individuals to underestimate their relative ability. They may mistakenly assume that tasks they find easy are also easy for others, leading them to believe their skills are more common than they actually are. This highlights a fundamental difficulty many people have in assessing their own expertise objectively.

Vocabulary

- overestimate 과대평가하다
- ineptitude 기량 부족
- illusory 환상에 불과한
- objectively 객관적으로

27-1 What is the Dunning-Kruger effect as described in the passage?

① A tendency for experts to overestimate the abilities of novices.

② A bias where low-ability individuals overestimate their own competence.

③ A phenomenon where people perform better when being observed.

④ A cognitive shortcut that helps in making quick decisions.

⑤ A state of confusion caused by having too much information.

27-2 According to the passage, why do incompetent individuals often fail to recognize their own lack of skill?

① They deliberately ignore feedback from others.

② They lack the metacognitive ability to evaluate their performance accurately.

③ They believe that confidence is more important than actual skill.

④ They compare themselves only to those who are even less skilled.

⑤ They are taught from a young age to always be self-assured.

27-3 Which statement is true about highly skilled individuals according to the passage?

① They consistently and accurately assess their own abilities.

② They tend to overestimate how unique their skills are.

③ They may underestimate their competence relative to others.

④ They are immune to all forms of cognitive bias.

⑤ They believe that most tasks are difficult for everyone.

[지문 28]

The human gut microbiome refers to the vast and diverse community of microorganisms, including bacteria, viruses, and fungi, that reside in our digestive tracts. For a long time, these microbes were thought to be passive inhabitants. However, recent scientific research has revealed that this complex ecosystem plays an active and critical role in human health. The gut microbiome aids in the digestion of food components that the human body cannot break down on its own, such as certain fibers. It also produces essential vitamins, like vitamin K and some B vitamins. Crucially, it helps regulate the immune system, training it to distinguish between friendly microbes and harmful pathogens. A balanced and diverse microbiome is strongly linked to overall health, whereas an imbalance, known as dysbiosis, has been associated with a wide range of conditions, including inflammatory bowel disease, obesity, and even mental health disorders.

Vocabulary

- inhabitants 거주자
- aids in ~을 돕다
- crucially 결정적으로
- inflammatory 염증성의

28-1 What is the gut microbiome, according to the passage?

① A type of digestive enzyme produced by the stomach.

② The system of nerves controlling the digestive process.

③ A community of microorganisms living in the digestive tract.

④ A medical condition related to poor digestion.

⑤ A set of vitamins essential for human health.

28-2 All of the following are mentioned as functions of the gut microbiome EXCEPT:**

① Aiding in the digestion of certain fibers.

② Producing essential vitamins like vitamin K.

③ Regulating the human immune system.

④ Breaking down all types of food consumed.

⑤ Helping the body distinguish harmful pathogens.

28-3 According to the passage, what is the term for an imbalance in the gut microbiome?

① Pathogenesis

② Dysbiosis

③ Homeostasis

④ Symbiosis

⑤ Inflammation

[지문 29]

The Sapir-Whorf hypothesis explores the intricate relationship between the language a person speaks and how that person perceives and understands the world. The hypothesis is generally presented in two forms. The "strong" version, known as linguistic determinism, posits that language dictates thought and that linguistic categories limit and determine cognitive categories. This version suggests that people's thoughts are entirely confined by the boundaries of their language. The "weak" version, called linguistic relativity, is more widely accepted today. It argues that language does not determine thought but certainly influences it. Linguistic categories and usage are seen as predisposing people to certain ways of thinking and perceiving reality. For instance, studies have shown that speakers of languages with more distinct words for colors are better at distinguishing between shades of those colors, lending support to the idea that language can shape our perceptual experiences.

Vocabulary

- intricate 복잡한
- determinism 결정론
- confine 국한시키다
- predisposing ~하게 만드는 경향이 있는

29-1 What are the two versions of the Sapir-Whorf hypothesis described in the passage?

① Linguistic creationism and linguistic evolution.

② Linguistic determinism and linguistic relativity.

③ Linguistic structure and linguistic function.

④ Linguistic universalism and linguistic specificity.

⑤ Linguistic competence and linguistic performance.

29-2 According to the passage, what is the current view on the "strong" version of the hypothesis?

① It is considered the most accurate explanation.

② It is seen as a theory that applies only to ancient languages.

③ It is less accepted than the "weak" version.

④ It has been proven correct by studies on color perception.

⑤ It is a new theory that is gaining popularity.

29-3 Which example does the passage provide to support the idea of linguistic relativity?

① People who speak multiple languages are more intelligent.

② Some languages lack words for numbers, making counting impossible.

③ The structure of a language's grammar reflects its culture's social hierarchy.

④ Having more words for colors may improve the ability to differentiate them.

⑤ The number of words in a language's vocabulary is declining.

[지문 30]

Hydrothermal vents are fissures on the ocean floor from which geothermally heated water erupts. They are commonly found in volcanically active areas, such as along mid-ocean ridges. The water emerging from these vents can reach extreme temperatures, yet it does not boil due to the immense pressure at these depths. This superheated water is rich in dissolved minerals from the Earth's crust. When this hot, mineral-rich fluid mixes with the near-freezing ocean water, the minerals precipitate, creating tall, chimney-like structures. Despite the hostile conditions of total darkness, high pressure, and extreme temperatures, these vents host unique and thriving ecosystems. Life here is not based on photosynthesis but on chemosynthesis. Microbes at the base of the food chain harness chemical energy from compounds like hydrogen sulfide, which are abundant in the vent fluid, to produce food. This supports a variety of specialized creatures, including giant tube worms and blind shrimp.

Vocabulary

- fissures 균열
- geothermally 지열로
- precipitate 침전하다
- chemosynthesis 화학 합성

30-1 What are hydrothermal vents, according to the passage?

① Underwater volcanoes that erupt lava.

② Cracks in the seafloor that release geothermally heated water.

③ Large, chimney-like rock formations made of salt.

④ Cold seeps on the ocean floor that release methane.

⑤ Areas on the seafloor where sunlight supports photosynthesis.

30-2 What is the fundamental process that supports life in hydrothermal vent ecosystems?

① Photosynthesis, using geothermal light.

② Predation on creatures from the sunlit zone.

③ Chemosynthesis, using chemical energy from the vents.

④ Bioluminescence produced by giant tube worms.

⑤ The direct absorption of heat as an energy source.

30-3 The passage mentions all of the following as characteristics of the hydrothermal vent environment EXCEPT:**

① High pressure.

② Extreme temperatures.

③ Complete darkness.

④ Abundant sunlight.

⑤ Presence of mineral-rich water.

[지문 31]

Metacognition, often described as "thinking about one's own thinking," is a critical component of successful learning. It involves a higher level of cognitive skill where learners actively monitor and regulate their own learning processes. This includes planning how to approach a learning task, monitoring comprehension, and evaluating progress toward the completion of a task. For instance, a student employing metacognitive strategies might first assess the difficulty of a reading assignment, then set specific goals for understanding it, and periodically pause to self-question whether they are truly grasping the main ideas. This active self-regulation is what separates passive reception of information from active, engaged learning. Studies in educational psychology consistently show that students who are taught and encouraged to use these strategies demonstrate improved academic performance, greater retention of information, and a deeper understanding of complex subjects.

Vocabulary

- metacognition 초인지
- regulate 조절하다
- periodically 주기적으로
- retention 보유, 기억

31-1 According to the passage, what is the core definition of metacognition?

① The ability to memorize facts quickly

② The process of thinking about one's own thought processes

③ The passive reception of new information

④ A teaching method focused on group discussion

⑤ The skill of reading assignments at a high speed

31-2 Which of the following is mentioned as a metacognitive strategy?

① Avoiding difficult reading assignments

② Relying solely on the instructor's explanation

③ Setting goals and monitoring one's own understanding

④ Completing tasks as quickly as possible without review

⑤ Memorizing key terms without understanding their context

31-3 What is a stated benefit of using metacognitive strategies?

① Reduced need for homework and assignments

② A guaranteed way to achieve the highest grades

③ A temporary boost in short-term memory

④ Improved academic results and better information retention

⑤ Greater enjoyment of social activities related to school

[지문 32]

The rise of antibiotic resistance is one of the most significant threats to global health today. Antibiotics, which have been a cornerstone of modern medicine for decades, are becoming less effective as bacteria evolve to resist them. This phenomenon is accelerated by the overuse and misuse of these medicines in both humans and agriculture. When bacteria are exposed to an antibiotic, the susceptible ones are killed, but resistant strains may survive and multiply. This natural selection process leads to the proliferation of "superbugs" that are immune to multiple types of antibiotics. The consequences are severe: common infections could become life-threatening, and routine surgical procedures, such as hip replacements or organ transplants, could become far too risky due to the danger of untreatable infections. The World Health Organization has warned that without urgent action, we are heading for a post-antibiotic era in which minor injuries could once again kill.

Vocabulary

- resistance 저항, 내성
- susceptible 민감한, 영향받기 쉬운
- proliferation 확산
- untreatable 치료할 수 없는

32-1 What is the main cause accelerating antibiotic resistance mentioned in the passage?

① The development of new surgical procedures

② The natural weakness of the human immune system

③ The excessive and improper use of antibiotics

④ The high cost of modern medical treatments

⑤ The decline in global sanitation standards

32-2 According to the passage, what happens when bacteria are exposed to antibiotics?

① All bacteria are immediately destroyed.

② Bacteria that are not resistant are killed, allowing resistant ones to thrive.

③ The bacteria transform into a completely new species.

④ The antibiotics become stronger and more effective over time.

⑤ The human body develops a natural immunity to the bacteria.

32-3 Which of the following is NOT mentioned as a potential consequence of antibiotic resistance?

① Minor injuries could become fatal.

② Common infections may turn into serious threats.

③ The development of entirely new viral diseases.

④ Routine surgeries could become highly dangerous.

⑤ The effectiveness of cornerstone modern medicines is reduced.

[지문 33]

Stoicism, an ancient Greek and Roman school of philosophy, offers profound insights into achieving a state of inner peace and resilience. A central concept in Stoic ethics is *apatheia*, which is often mistranslated as "apathy." However, *apatheia* does not mean a lack of feeling or emotional emptiness. Rather, it refers to a state of equanimity or tranquility, free from the disturbance of destructive emotions or passions, such as irrational fear, anger, or envy. The Stoics believed that these passions arise from false judgments about what is truly good or bad. By using reason to understand the nature of the world and distinguishing between what we can control and what we cannot, an individual can achieve *apatheia*. This state allows one to face life's challenges with calm and clarity, without being overwhelmed by emotional turmoil. It is a state of being emotionally robust, not emotionally absent.

Vocabulary

- profound 심오한
- equanimity 평정, 침착
- distinguishing 구별하는
- robust 강건한

33-1 What is the correct meaning of the Stoic concept of *apatheia* as described in the passage?

① A complete absence of any emotion

② A state of indifference towards life

③ A condition of being free from disturbing passions

④ A philosophical belief in the pointlessness of existence

⑤ A feeling of constant, irrational anger

33-2 According to the Stoics, what is the origin of destructive emotions?

① External events that are beyond our control

② The natural and unavoidable state of human beings

③ A lack of social interaction and community

④ False judgments about what is good or bad

⑤ The influence of non-Stoic philosophical schools

33-3 What does the passage suggest is the key to achieving *apatheia*?

① Avoiding all difficult situations and challenges

② Using reason to differentiate what one can and cannot control

③ Suppressing all feelings, both positive and negative

④ Focusing solely on accumulating wealth and status

⑤ Engaging in intense physical exercise to distract the mind

[지문 34]

Postmodern literature, which emerged in the mid-20th century, represents a significant departure from the principles of modernism. While modernism often lamented the loss of meaning and coherence in the modern world, postmodernism tends to celebrate it. A key characteristic of postmodern literature is its playful and ironic tone. It often employs techniques like fragmentation, where the narrative is broken into disjointed pieces, and intertextuality, which involves referencing other texts. Another feature is metafiction, where the work deliberately draws attention to its own status as a work of art, blurring the line between fiction and reality. Postmodern authors challenge the idea of a single, objective truth, instead presenting a world of multiple, often contradictory, perspectives. They question grand narratives—the overarching stories that cultures use to explain history and reality—and instead focus on mini-narratives and subjective experiences.

Vocabulary

- lamented 애도했다
- fragmentation 파편화
- metafiction 메타픽션
- overarching 가장 중요한

34-1 What is a primary difference between modernism and postmodernism mentioned in the passage?

① Modernism uses fragmentation, while postmodernism prefers linear narratives.

② Modernism celebrates the loss of meaning, while postmodernism mourns it.

③ Modernism seeks objective truth, while postmodernism questions it.

④ Postmodernism focuses on grand narratives, while modernism focuses on mini-narratives.

⑤ Postmodern literature emerged before modern literature.

34-2 Which literary technique is described as deliberately highlighting a work's artificial nature?

① Intertextuality

② Fragmentation

③ Irony

④ Metafiction

⑤ Grand narrative

34-3 According to the passage, postmodern literature is characterized by which of the following?

① A serious and mournful tone

② A single, coherent narrative structure

③ The presentation of multiple, conflicting viewpoints

④ A clear distinction between fiction and reality

⑤ An attempt to establish a universal truth

[지문 35]

Participation in extreme sports, such as skydiving, rock climbing, and big-wave surfing, is often misunderstood as mere thrill-seeking or a disregard for personal safety. However, psychological research suggests that the motivations are far more complex. For many participants, these activities are not about courting death but about intensely living. A primary driver is the experience of "flow," a state of complete absorption in an activity where one loses track of time and self-consciousness. Achieving flow requires a perfect balance between the challenge of the task and the skill of the participant. Furthermore, successfully navigating the high-risk environments of extreme sports can lead to profound feelings of competence and self-efficacy. It is a way of pushing personal boundaries and discovering one's true capabilities. For these individuals, the carefully calculated risk is a tool for self-discovery and empowerment, not a reckless gamble.

Vocabulary

- disregard 무시
- absorption 몰입
- self-efficacy 자기 효능감
- empowerment 권한 부여

35-1 What is the main argument of the passage regarding extreme sports?

① Extreme sports are only for people who do not value their lives.

② The motivations for participating in extreme sports are complex, not just thrill-seeking.

③ The primary goal of extreme sports is to experience the "flow" state.

④ Only highly skilled professionals should ever attempt extreme sports.

⑤ Extreme sports have become less popular due to their inherent dangers.

35-2 The passage defines the "flow" state as:**

① a feeling of extreme fear and anxiety.

② a state of total immersion in an activity.

③ a disregard for one's own skills.

④ a brief moment of realizing the danger.

⑤ a competitive drive to be the best.

35-3 According to the passage, what is a key psychological benefit of engaging in extreme sports?

① Gaining popularity and media attention

② A temporary escape from everyday problems

③ Increased feelings of competence and self-efficacy

④ Developing a higher tolerance for physical pain

⑤ Learning to work effectively in a team

[지문 36]

The Silk Road, a network of trade routes connecting the East and West, was far more than a mere conduit for silk and spices. For centuries, it served as a vibrant channel for profound cultural, religious, and technological exchange. As merchants journeyed across vast deserts and high mountains, they carried with them not only goods but also ideas. Buddhism, originating in India, traveled eastward along these routes to become a major religion in China and beyond. Similarly, Christianity and Islam spread along the same paths. Technological innovations, such as the techniques for papermaking and gunpowder, moved from China to the West, fundamentally altering the course of history. Art styles and musical traditions also intermingled, creating unique hybrid forms. Therefore, the true legacy of the Silk Road lies not just in its economic impact, but in its role as the world's first great information superhighway, fostering a dynamic interplay of civilizations.

Vocabulary

- conduit 도관, 통로
- originating 비롯된
- intermingled 뒤섞였다
- legacy 유산

36-1 What is the main point the author makes about the Silk Road?

① It was primarily important for the trade of luxury goods like silk.

② Its most significant legacy is its role in cultural and intellectual exchange.

③ The journey along the Silk Road was too dangerous to be truly effective.

④ It was mainly used for the spread of Chinese technology to the East.

⑤ The Silk Road's economic impact has been greatly exaggerated by historians.

36-2 Which of the following is mentioned as a technology that spread from East to West via the Silk Road?

① The compass

② The printing press

③ Papermaking

④ The steam engine

⑤ The telescope

36-3 The passage suggests that the Silk Road's role was analogous to a modern:**

① stock exchange.

② multinational corporation.

③ military alliance.

④ information superhighway.

⑤ international airport.

[지문 37]

Bioremediation is an innovative environmental cleanup strategy that utilizes living organisms, primarily microorganisms like bacteria and fungi, to break down or neutralize pollutants. This process harnesses the natural metabolic capabilities of these organisms to transform hazardous substances into non-toxic or less toxic compounds, such as water and carbon dioxide. One of the most well-known applications of bioremediation is in cleaning up oil spills. Certain species of bacteria are able to "eat" the hydrocarbons in crude oil, effectively removing the pollutant from the marine environment. Compared to traditional cleanup methods, which often involve physical removal or chemical treatments, bioremediation can be more cost-effective and less intrusive to the ecosystem. However, its effectiveness depends heavily on environmental conditions like temperature, oxygen levels, and the presence of necessary nutrients, which must be optimal for the microorganisms to thrive and perform their function.

Vocabulary

- utilizes 활용하다
- neutralize 중화시키다
- intrusive 거슬리는, 침입적인
- thrive 번성하다

37-1 What is the primary purpose of bioremediation?

① To create new species of microorganisms

② To use living organisms to clean up pollutants

③ To physically remove waste from a site

④ To study the metabolism of bacteria and fungi

⑤ To develop new chemical treatments for pollution

37-2 According to the passage, what is a famous example of bioremediation in action?

① Purifying drinking water in urban areas

② Using bacteria to break down oil from spills

③ Creating compost for agricultural use

④ Neutralizing acid rain in forests

⑤ Reducing carbon emissions from factories

37-3 What is mentioned as a limitation or requirement for successful bioremediation?

① It is significantly more expensive than other methods.

② It can only be used on land, not in water.

③ It requires specific environmental conditions to be effective.

④ It introduces harmful new organisms into the ecosystem.

⑤ It is a much slower process than any traditional method.

[지문 38]

The rise of the "gig economy" has fundamentally reshaped modern labor markets. This economic model is characterized by the prevalence of short-term contracts or freelance work as opposed to permanent jobs. Digital platforms, such as those for ride-sharing or freelance services, act as intermediaries, connecting service providers directly with customers. For workers, the gig economy offers undeniable benefits, most notably flexibility in work hours and the autonomy to be one's own boss. However, this independence often comes at a significant cost. Gig workers typically lack the job security, benefits, and legal protections afforded to traditional employees, such as health insurance, paid sick leave, and retirement plans. This creates a precarious workforce that enjoys freedom but faces economic instability and uncertainty. The debate continues over how to classify these workers and whether new regulations are needed to provide a safety net without stifling the innovation that defines the gig economy.

Vocabulary

- prevalence 널리 퍼짐
- autonomy 자율성
- precarious 불안정한
- stifling 억누르는

38-1 What is the defining characteristic of the gig economy according to the passage?

① A focus on long-term, stable employment

② The dominance of short-term contracts and freelance work

③ A system where the government provides all jobs

④ An economy based solely on manufacturing

⑤ The requirement for all workers to have a university degree

---

38-2 Which of the following is mentioned as a major advantage for workers in the gig economy?

① High levels of job security

② Comprehensive employee benefits

③ Flexibility and autonomy

④ Guaranteed minimum wage

⑤ Strong legal protections

38-3 What is a significant drawback for gig workers discussed in the passage?

① A lack of freedom in choosing tasks

② The necessity of working in a fixed office location

③ The absence of job security and benefits like health insurance

④ Too much supervision from platform managers

⑤ The difficulty in communicating directly with customers

[지문 39]

The Impressionist movement, which emerged in France in the late 19th century, marked a radical break from the traditions of academic painting. Artists like Claude Monet, Edgar Degas, and Camille Pissarro rejected the highly finished and detailed style favored by the art establishment. Instead, their primary goal was to capture the fleeting, sensory effect of a scene—the "impression" that an object or landscape made upon the eye at a particular moment. To achieve this, they used visible brushstrokes, an emphasis on the accurate depiction of light in its changing qualities, and ordinary subject matter from everyday life. They often painted outdoors (*en plein air*) to observe scenes and light directly. This approach was initially met with harsh criticism from conventional art critics, who found their work to be unfinished and amateurish. However, Impressionism ultimately paved the way for modern art by challenging the long-held rules of artistic representation.

Vocabulary

- radical 급진적인
- establishment 기득권층
- fleeting 덧없는
- amateurish 아마추어 같은

39-1 What was the main objective of Impressionist painters?

① To create highly detailed and realistic portraits of historical figures

② To paint dramatic scenes from mythology and religion

③ To capture the momentary sensory effect of a scene

④ To follow the strict rules of the traditional art academies

⑤ To create abstract art with no connection to reality

39-2 Which of the following is NOT described as a technique or characteristic of Impressionism?

① Painting outdoors to observe light directly

② Using visible, distinct brushstrokes

③ Choosing subject matter from everyday life

④ A smooth, highly polished and finished surface

⑤ Focusing on the changing qualities of light

39-3 How was Impressionism initially received by art critics?

① It was immediately celebrated as a revolutionary new style.

② It was largely ignored and received no attention.

③ It was criticized for looking unfinished and unprofessional.

④ It was praised for its technical perfection and detail.

⑤ It was accepted only after the artists explained their theories.

[지문 40]

Neuroplasticity, also known as brain plasticity, is the remarkable ability of the brain to change and adapt its structure and function in response to experience. For a long time, it was believed that the adult brain was a static, fixed organ. However, modern neuroscience has shown that the brain is dynamic and can reorganize itself by forming new neural pathways and altering existing ones. This process occurs throughout an individual's life. Neuroplasticity is the fundamental mechanism underlying learning and memory; when we learn a new skill, like playing a musical instrument, our brain creates and strengthens specific neural connections. It is also crucial for recovery from brain injury. Following a stroke, for example, the brain can sometimes rewire itself to allow undamaged areas to take over the functions of the damaged regions. This inherent adaptability highlights the brain's incredible capacity for resilience and lifelong change.

Vocabulary

- neuroplasticity 신경가소성
- static 정적인
- underlying 근본적인
- inherent 내재된

40-1 What is the best definition of neuroplasticity?

① The brain's ability to generate new brain cells

② The fixed and unchangeable nature of the adult brain

③ The process of memory loss due to aging

④ The brain's capacity to reorganize itself based on experience

⑤ The part of the brain responsible for controlling muscles

40-2 According to the passage, when does neuroplasticity occur?

① Only during childhood and adolescence

② Only after a severe brain injury

③ Throughout a person's entire life

④ Primarily when a person is sleeping

⑤ Only in individuals with exceptional intelligence

40-3 The passage mentions that neuroplasticity is essential for which two processes?

① Dreaming and sleeping

② Aging and forgetting

③ Learning and recovery from injury

④ Breathing and heart rate regulation

⑤ Emotional response and reflex actions

[지문 41]

CRISPR-Cas9 is a revolutionary gene-editing technology that has transformed the field of molecular biology. Often described as "molecular scissors," it allows scientists to make precise changes to the DNA of organisms. The system consists of two key components: the CRISPR part, which is a piece of RNA that guides the tool to the correct DNA sequence, and the Cas9 enzyme, which cuts the DNA at that specific location. Once the DNA is cut, scientists can either remove a faulty gene or insert a new one. While this technology holds immense promise for treating genetic diseases like cystic fibrosis and sickle cell anemia, it also raises significant ethical concerns. The possibility of creating "designer babies" or making heritable changes to the human germline has sparked a global debate about the responsible use of this powerful tool.

Vocabulary

- transformed 변형시켰다
- precise 정밀한
- faulty 결함이 있는
- germline 생식 계열

41-1 What is the primary function of the CRISPR-Cas9 system described in the passage?

① To create new organisms from scratch

② To precisely edit the DNA sequences of living organisms

③ To diagnose genetic diseases without altering genes

④ To replicate DNA for cloning purposes

⑤ To analyze the ethical implications of genetic research

41-2 According to the passage, what is the role of the Cas9 enzyme?

① It guides the system to the target DNA.

② It repairs the DNA after it has been changed.

③ It acts as a pair of scissors to cut the DNA.

④ It carries the new gene to be inserted.

⑤ It identifies faulty genes for removal.

41-3 Which of the following is mentioned as a major ethical issue related to CRISPR-Cas9?

① The high cost of the technology making it inaccessible

② The potential for unforeseen mutations in other parts of the DNA

③ The possibility of altering human genes in a way that can be inherited

④ The debate over intellectual property rights for the technology

⑤ The risk of the technology being used for biological warfare

[지문 42]

The Great Pacific Garbage Patch is a massive accumulation of marine debris in the North Pacific Ocean. Contrary to popular imagination, it is not a solid island of trash. Instead, it is a vast, diffuse area where high concentrations of plastics, chemical sludge, and other debris are suspended at or just below the surface. The majority of this debris consists of microplastics, which are tiny plastic particles less than five millimeters in diameter. These microplastics are particularly insidious because they are easily ingested by marine life, causing harm and entering the food chain. Cleaning up the patch presents immense challenges. Its sheer size and the fact that the debris is spread across a wide and deep column of water make collection efforts difficult and costly. Furthermore, any cleanup method must be carefully designed to avoid harming the marine organisms that live in the same area.

Vocabulary

- accumulation 축적
- diffuse 분산된
- insidious 교활한, 잠행성의
- sheer 순전한

42-1 According to the passage, what is the Great Pacific Garbage Patch primarily composed of?

① Large, floating islands of solid waste

② A dense collection of chemical sludge

③ Sunken ships and other large debris

④ Widely dispersed microplastics

⑤ Discarded fishing nets and equipment

42-2 What makes cleaning up the Great Pacific Garbage Patch so difficult?

① The trash is located in politically disputed waters.

② The debris is spread out over a vast and deep area.

③ The plastic is too toxic to handle safely.

④ There is no available technology for collecting plastics.

⑤ Marine animals actively interfere with cleanup equipment.

42-3 Which of the following is NOT mentioned as a characteristic of the microplastics in the patch?

① They are a major component of the debris.

② They are easily consumed by marine animals.

③ They are smaller than five millimeters in diameter.

④ They are visible as a large, solid island from space.

⑤ They can introduce harmful substances into the food chain.

[지문 43]

"Third Culture Kids," or TCKs, is a term used to describe individuals who have spent a significant part of their developmental years outside their parents' culture. The "first culture" refers to their parents' home culture, while the "second culture" refers to the host culture(s) where they have lived. TCKs build relationships to all of the cultures they've experienced, without having full ownership in any. This unique upbringing often results in a distinct worldview. They tend to be highly adaptable, culturally sensitive, and proficient in multiple languages. However, they may also struggle with a sense of rootlessness and have a complex answer to the simple question, "Where are you from?" Their identity is not tied to a single geographical location but is shaped by the people and experiences they have encountered across the globe. The "third culture" is this unique interstitial space that they inhabit.

Vocabulary

- developmental 발달의
- proficient 능숙한
- rootlessness 뿌리 없음
- interstitial 사이의, 틈새의

43-1 According to the passage, who are "Third Culture Kids"?

① Children who are adopted by parents from a different culture.

② Individuals who grow up in a country different from their parents' homeland.

③ Tourists who travel to many different countries for a short period.

④ Immigrants who completely assimilate into a new culture.

⑤ People who study different cultures in an academic setting.

43-2 What is a common challenge faced by TCKs as described in the passage?

① Difficulty in learning new languages

② A lack of adaptability to new environments

③ A feeling of not truly belonging anywhere

④ An inability to build relationships with people from other cultures

⑤ A strong sense of attachment to one specific place

43-3 What does the "third culture" refer to in the context of the passage?

① The culture of the United States, where the term originated.

② A globalized monoculture that is replacing local cultures.

③ The academic field that studies cross-cultural experiences.

④ The unique cultural space created from the experiences of living between cultures.

⑤ The future culture that will emerge from the mixing of all current cultures.

[지문 44]

The traditional linear economy follows a "take-make-dispose" model, where raw materials are collected, transformed into products, used, and then discarded as waste. This approach has led to resource depletion and significant environmental pollution. In contrast, the circular economy offers a sustainable alternative. It is a regenerative system designed to minimize waste and maximize the use of resources. The core principles of the circular economy are often summarized as the "3Rs": Reduce, Reuse, and Recycle. This model emphasizes designing products for durability, repairability, and disassembly. Instead of being thrown away, used products and materials are recovered and regenerated, re-entering the production cycle. By closing the loop, the circular economy aims to decouple economic growth from resource consumption and create a more resilient and environmentally friendly system.

Vocabulary

- discarded 버려진
- regenerative 재생하는
- durability 내구성
- decouple 분리하다

44-1 What is the primary goal of the circular economy?

① To accelerate the production of consumer goods

② To reduce waste and make the most of available resources

③ To shift all manufacturing jobs overseas

④ To increase the consumption of raw materials

⑤ To make products cheaper by reducing their quality

44-2 How does the linear economy described in the passage operate?

① It focuses on regenerating and recovering materials.

② It prioritizes the use of renewable energy sources.

③ It follows a pattern of production, use, and disposal.

④ It designs products to be easily repaired and reused.

⑤ It aims to eliminate environmental pollution completely.

44-3 Which of the following is NOT mentioned as a principle or feature of the circular economy?

① Designing products that are easy to take apart

② Reducing the overall consumption of goods

③ Reusing products for as long as possible

④ Finding new sources of raw materials to exploit

⑤ Recovering and regenerating materials from used products

[지문 45]

The Bauhaus was a revolutionary German art school operational from 1919 to 1933 that fundamentally changed modern design. Its core philosophy was to unify art, craft, and technology, breaking down the traditional distinction between fine arts (like painting and sculpture) and applied arts (like furniture making and architecture). The school's founder, Walter Gropius, envisioned a new "total work of art" where all arts would be brought together. Bauhaus teaching focused on functionalism, promoting the idea that form should follow function. This led to an aesthetic characterized by clean lines, simple geometric shapes, and an absence of unnecessary ornamentation. The movement's influence is immense and can still be seen today in minimalist architecture, graphic design, and modern furniture. By prioritizing mass-producible yet aesthetically pleasing designs, the Bauhaus made art and good design accessible to the general public.

Vocabulary

- unify 통합하다
- functionalism 기능주의
- ornamentation 장식
- accessible 접근 가능한

45-1 What was the central idea of the Bauhaus school?

① To preserve traditional artistic techniques exclusively

② To separate the disciplines of art and technology

③ To create art that was purely decorative and ornate

④ To merge fine arts with practical crafts and technology

⑤ To focus solely on painting and sculpture

45-2 According to the passage, what kind of aesthetic is associated with the Bauhaus?

① Complex patterns and elaborate details

② Natural, flowing shapes inspired by nature

③ Bright, chaotic colors and abstract forms

④ Simple geometric forms and minimal decoration

⑤ A style that mimics classical Greek and Roman art

45-3 What can be inferred about products designed with the Bauhaus philosophy?

① They were intended only for wealthy patrons.

② They were designed to be both useful and mass-producible.

③ They were handmade and unique, never to be replicated.

④ They prioritized artistic expression over practicality.

⑤ They were often decorated with historical symbols.

[지문 46]

The Silk Road is often imagined as a single, long highway primarily for transporting silk from China to the West. However, this is a simplified view. In reality, the "Silk Road" was a vast network of interconnected trade routes, both terrestrial and maritime, that linked various cultures across Eurasia for centuries. While silk was indeed a major commodity, it was far from the only one. Spices, precious metals, paper, and gunpowder traveled westward, while goods like wool, gold, and silver flowed east. More importantly, these routes were conduits for much more than just commercial goods. They facilitated an unprecedented exchange of ideas, technologies, religions (such as Buddhism and Christianity), philosophies, and even diseases. This dynamic interplay of cultures profoundly shaped the development of civilizations from Europe to Asia, making the Silk Road one of the most significant achievements in the history of world trade and cultural diffusion.

Vocabulary

- terrestrial 육상의
- maritime 해상의
- commodity 상품
- diffusion 확산

46-1 What common misconception about the Silk Road does the passage correct?

① That it was primarily a sea route.

② That it was a single, continuous road.

③ That it was only used for a very short time.

④ That it was mainly used to transport wool to China.

⑤ That it had little impact on cultural development.

46-2 Besides commercial goods, what else was transmitted along the Silk Road?

① Only military strategies and weapons

② Exclusively artistic techniques

③ A wide range of ideas, beliefs, and technologies

④ Official government decrees and laws

⑤ Animal species for trade and agriculture

46-3 According to the passage, what was the ultimate significance of the Silk Road?

① It made silk the most valuable commodity in the world.

② It caused the fall of the Roman Empire.

③ It led to the isolation of Eastern and Western cultures.

④ It greatly influenced the development of civilizations through trade and cultural exchange.

⑤ It proved that land-based trade was more efficient than sea-based trade.

[지문 47]

The Dunning-Kruger effect is a cognitive bias in which people with low ability or competence in a specific domain tend to overestimate their own skill level. In other words, individuals who are unskilled in a particular area often lack the self-awareness to recognize their own incompetence. This lack of metacognitive ability prevents them from objectively evaluating their performance. For instance, a novice chess player might believe they are far more skilled than they actually are, simply because they don't know enough about chess strategy to see their own mistakes. Conversely, the effect also suggests that highly competent individuals may underestimate their relative competence. They might mistakenly assume that tasks which are easy for them are also easy for others. This psychological phenomenon highlights the complex relationship between confidence and actual ability, reminding us that confidence is not always a reliable indicator of skill.

Vocabulary

- competence 능력
- incompetence 무능
- underestimate 과소평가하다
- indicator 지표

47-1 What is the main idea of the Dunning-Kruger effect?

① Highly skilled people always have high confidence.

② People with low skills in an area tend to overestimate their ability.

③ Confidence is directly proportional to a person's actual skill.

④ Most people can accurately assess their own abilities.

⑤ Only experts can recognize incompetence in others.

47-2 According to the passage, how might highly skilled individuals perceive their own abilities?

① They tend to overestimate their skills significantly.

② They are unable to recognize skill in others.

③ They may believe their skills are more common than they actually are.

④ They often refuse to teach others what they know.

⑤ They have an accurate and objective view of their competence.

47-3 Which statement best describes people with low competence, according to the passage?

① They are aware of their shortcomings but hide them.

② They actively seek feedback to improve their skills.

③ They are often unaware of their own lack of skill.

④ They assume that most tasks are difficult for everyone.

⑤ They have low confidence in their abilities.

[지문 48]

The human gut microbiome refers to the vast community of trillions of microorganisms, including bacteria, viruses, and fungi, that reside in our digestive tracts. For a long time, these microbes were thought to be passive bystanders, but scientific research has revealed their critical role in human health. This complex ecosystem aids in digestion by breaking down food components that our bodies cannot, such as certain fibers, and helps in the synthesis of essential vitamins like vitamin K and B vitamins. Beyond digestion, the gut microbiome is integral to the development and function of our immune system, training it to distinguish between friendly microbes and harmful pathogens. Furthermore, emerging research suggests a strong connection between gut health and mental well-being, often called the "gut-brain axis." Factors like diet, stress, and antibiotic use can significantly alter the balance of the microbiome, impacting our overall health.

Vocabulary

- bystanders 방관자
- integral 필수적인
- distinguish 구별하다
- alter 바꾸다

48-1 What is the gut microbiome?

① A type of digestive disease

② The physical lining of the human intestine

③ A community of microorganisms living in the digestive system

④ A specific vitamin produced by the body

⑤ A part of the brain that controls hunger

48-2 Which of the following is mentioned as a function of the gut microbiome?

① It directly fights cancer cells in the body.

② It helps produce essential vitamins.

③ It regulates the body's heart rate.

④ It is responsible for filtering blood.

⑤ It stores excess fat from food.

48-3 According to the passage, what can have a negative impact on the balance of the gut microbiome?

① Regular exercise

② A diet high in fiber

③ The consumption of vitamins

④ The use of antibiotics

⑤ A strong immune system

[지문 49]

A "smart city" is an urban area that uses various types of electronic methods and sensors to collect data. Insights gained from that data are used to manage assets, resources, and services efficiently. The ultimate goal is to improve the quality of life for its citizens. For example, smart traffic management systems can monitor traffic flow in real-time using sensors and cameras, adjusting traffic light timings to reduce congestion. Smart grids can optimize energy distribution, reducing waste and preventing blackouts. Other applications include smart waste management, where sensors in public bins notify sanitation departments when they are full, and smart lighting that dims when no one is around to save energy. While the concept promises a more sustainable and efficient urban future, it also raises concerns about data privacy, security, and the potential for technological surveillance.

Vocabulary

- insights 통찰력
- congestion 혼잡
- sanitation 위생
- surveillance 감시

49-1 What is the main purpose of a smart city, as described in the passage?

① To increase the population of urban areas

② To monitor the activities of all citizens for security

③ To enhance the quality of life through efficient resource management

④ To replace all human jobs with automated systems

⑤ To promote the use of private cars over public transport

49-2 What technology is fundamental to the operation of a smart city?

① The use of sensors and data collection

② The construction of taller skyscrapers

③ The expansion of public parks and green spaces

④ The development of new forms of paper currency

⑤ The implementation of stricter laws and regulations

49-3 Which of the following is NOT given as an example of a smart city application?

① Adjusting traffic lights to ease congestion

② Notifying sanitation crews when trash bins are full

③ Creating personalized public education programs

④ Optimizing the distribution of electrical energy

⑤ Dimming streetlights to conserve power

[지문 50]

The Sapir-Whorf hypothesis, also known as linguistic relativity, explores the relationship between the language a person speaks and how they perceive and understand the world. The hypothesis is often presented in two versions: a "strong" version and a "weak" version. The strong version, called linguistic determinism, argues that language *determines* thought and that linguistic categories limit and define cognitive categories. According to this view, people can only think in the ways their language allows. However, this version is not widely accepted by modern linguists. The weak version, linguistic influence, is more favored. It suggests that language *influences* thought and that linguistic categories can affect a person's perceptions and decisions, but does not completely determine them. For example, a language that has many different words for shades of blue might make its speakers more adept at distinguishing between them.

Vocabulary

- linguistic 언어의
- determines 결정하다
- adept 능숙한
- distinguishing 구별하는

50-1 What is the central question addressed by the Sapir-Whorf hypothesis?

① How new languages are created over time

② Which language is the most complex in the world

③ How language affects a person's perception of reality

④ Why children learn languages more easily than adults

⑤ The process of translating from one language to another

50-2 What is the main difference between the "strong" and "weak" versions of the hypothesis?

① The strong version applies to written language, while the weak version applies to spoken language.

② The strong version claims language determines thought, while the weak version claims it only influences thought.

③ The strong version is supported by modern linguists, while the weak version is not.

④ The strong version focuses on vocabulary, while the weak version focuses on grammar.

⑤ The strong version was proposed by Sapir, and the weak version was proposed by Whorf.

50-3 According to the passage, what is the general view of modern linguists regarding the hypothesis?

① They completely reject both versions of the hypothesis.

② They universally accept the strong version (linguistic determinism).

③ They tend to support the weak version, which suggests language influences thought.

④ They believe the hypothesis only applies to ancient, extinct languages.

⑤ They are still debating which version is more plausible, with no clear consensus.

[지문 51]

Self-Determination Theory (SDT) is a prominent theory of human motivation that focuses on the psychological needs underlying an individual's choices and behaviors. Developed by Edward Deci and Richard Ryan, SDT proposes that all humans have three innate and universal psychological needs: autonomy, competence, and relatedness. Autonomy refers to the need to feel in control of one's own behaviors and goals. Competence is the need to feel effective in dealing with the environment and mastering new skills. Finally, relatedness is the need to have a sense of belonging and connection with others. According to SDT, when these three needs are satisfied, individuals are more likely to experience optimal functioning, well-being, and intrinsic motivation. Conversely, if these needs are thwarted, it can lead to diminished motivation and psychological distress.

Vocabulary

- prominent 저명한
- innate 타고난
- intrinsic 내재적인
- thwarted 좌절된

51-1 According to the passage, which of the following is NOT one of the core psychological needs in Self-Determination Theory?

① The need to feel a sense of mastery.

② The need to form social connections.

③ The need to act according to one's own will.

④ The need for financial security and stability.

⑤ The need to be effective in one's actions.

51-2 What is the main purpose of Self-Determination Theory as described in the passage?

① To explain the origins of psychological disorders.

② To identify the fundamental psychological needs that drive human motivation.

③ To create a new model for corporate management and leadership.

④ To compare intrinsic and extrinsic motivation in children.

⑤ To criticize traditional theories of behavioral psychology.

51-3 According to the passage, what is a likely outcome when the need for relatedness is NOT met?

① Individuals will focus more on achieving competence.

② Individuals may experience reduced motivation and psychological discomfort.

③ Individuals will seek more autonomy to compensate for the loss.

④ Individuals will develop stronger intrinsic motivation.

⑤ Individuals will become more effective in their professional lives.

[지문 52]

The role of sleep in memory consolidation is a subject of intense scientific research. Memory consolidation is the process by which a temporary, fragile memory is transformed into a more stable, long-lasting form. Research suggests that different stages of sleep contribute to consolidating different types of memories. For instance, Rapid Eye Movement (REM) sleep, often associated with dreaming, is believed to be crucial for consolidating procedural memory, which involves skills and habits like playing a musical instrument or riding a bicycle. During REM sleep, the brain replays the neural patterns associated with the newly learned skill, strengthening the connections between neurons. This "offline" rehearsal helps to solidify the memory, making the skill more automatic and precise upon waking. Therefore, getting a sufficient amount of REM sleep after practicing a new skill is vital for mastery.

Vocabulary

- consolidation 공고화, 통합
- fragile 깨지기 쉬운
- procedural 절차적인
- solidify 굳히다

52-1 What is the main topic of the passage?

① The various stages of the human sleep cycle.

② The negative effects of sleep deprivation on health.

③ The function of REM sleep in strengthening skill-based memories.

④ The process of learning to play a musical instrument.

⑤ The difference between procedural and declarative memory.

52-2 According to the passage, what happens in the brain during REM sleep to help consolidate procedural memory?

① The brain erases unimportant memories to make space for new ones.

② The brain actively suppresses all neural activity to rest.

③ The brain repeats the neural activity patterns related to a new skill.

④ The brain creates entirely new neural pathways unrelated to recent experiences.

⑤ The brain focuses solely on consolidating emotional memories.

52-3 Which of the following can be inferred from the passage?

① All types of memories are consolidated during REM sleep.

② Dreaming is the only function of REM sleep.

③ Practicing a new skill is more important than sleeping afterwards.

④ A student learning a new dance routine would benefit from a good night's sleep.

⑤ Memory consolidation only occurs while a person is awake.

[지문 53]

The Enlightenment was a transformative intellectual and philosophical movement that dominated Europe during the 17th and 18th centuries. At its core, the movement championed reason as the primary source of authority and legitimacy, advocating for ideals such as liberty, progress, tolerance, and the separation of church and state. Thinkers like John Locke argued that humans are born with natural rights, including life, liberty, and property, and that governments exist to protect these rights. This was a radical departure from the prevailing notion of the divine right of kings, which held that a monarch's authority was granted directly by God. The Enlightenment's emphasis on rational inquiry and individual rights fundamentally challenged traditional structures of power, laying the groundwork for modern democracies, revolutions, and the scientific method. Its influence extended far beyond politics, shaping modern ethics, aesthetics, and social sciences.

Vocabulary

- transformative 변혁적인
- championed 옹호했다
- legitimacy 정당성
- prevailing 지배적인

53-1 What is the central principle of the Enlightenment as described in the passage?

① The unquestionable authority of the monarchy.

② The supremacy of religious doctrine over secular law.

③ The use of reason as the main source of authority.

④ The importance of tradition in maintaining social order.

⑤ The rejection of all forms of government.

53-2 According to the passage, what was John Locke's view on the purpose of government?

① To enforce religious uniformity among its citizens.

② To expand its territory through military conquest.

③ To accumulate wealth for the ruling class.

④ To safeguard the inherent rights of individuals.

⑤ To exercise absolute power granted by a divine entity.

53-3 The passage suggests that the Enlightenment's ideas were considered radical because they _____.**

① promoted a return to classical Greek and Roman values

② questioned the established power of the monarchy and the church

③ were based on emotional and spiritual insights

④ advocated for a society without any laws or rules

⑤ were only accepted by a small, isolated group of scholars

[지문 54]

The process of translation is far more complex than simply replacing words in one language with their equivalents in another. A significant challenge translators face is the issue of cultural loss, particularly with words or concepts that are deeply embedded in a specific culture. These are often referred to as "untranslatable" because they lack a direct one-to-one equivalent in the target language. For example, the Danish word 'hygge' describes a cozy, convivial atmosphere and a feeling of contentment, a concept that requires a whole phrase to explain in English. Similarly, the Japanese word 'ikigai' refers to a reason for being or a sense of purpose that brings satisfaction. When such words are translated, their rich cultural nuances and emotional resonance are often diminished or lost entirely. This forces translators to choose between preserving the original meaning through lengthy explanation or sacrificing some nuance for the sake of fluency and readability.

Vocabulary

- equivalents 등가물
- convivial 유쾌한
- nuances 뉘앙스
- resonance 공명, 울림

54-1 What is the main problem in translation discussed in the passage?

① The lack of skilled translators in the industry.

② The difficulty of translating scientific terminology accurately.

③ The loss of cultural meaning when translating certain words.

④ The high cost associated with professional translation services.

⑤ The slow speed of translating long literary works.

54-2 According to the passage, why is a word like 'hygge' considered "untranslatable"?

① It is a newly invented word with no established meaning.

② It has multiple, contradictory meanings in its original language.

③ It describes a culturally specific concept without a direct single-word equivalent in other languages.

④ It is a forbidden word that is not allowed to be translated.

⑤ It can only be understood by native speakers of Danish.

54-3 What choice must a translator often make when dealing with culturally specific words?

① To invent a new word in the target language.

② To ignore the word completely and omit it from the text.

③ To replace the word with a concept from the translator's own culture.

④ To choose between a detailed explanation and a less nuanced but more fluent translation.

⑤ To consult the original author for a proper translation.

[지문 55]

The debate over whether esports, or competitive video gaming, should be recognized as a legitimate sport and included in major international events like the Olympic Games is intensifying. Proponents argue that esports require immense skill, strategic thinking, quick reflexes, and rigorous training, similar to traditional sports. Top players practice for many hours a day, study their opponents, and often compete in teams, fostering teamwork and communication. Furthermore, the global popularity and massive viewership of esports tournaments rival those of many established sports. On the other hand, opponents question the physical exertion component, a criterion often considered essential for a sport. They argue that while mentally demanding, esports lack the whole-body athleticism seen in sports like swimming or track and field. Critics also raise concerns about the commercial nature of esports, as the games are owned by private companies, and the potential health issues related to a sedentary lifestyle.

Vocabulary

- legitimate 합법적인, 정당한
- proponents 지지자들
- exertion 노력, 분투
- sedentary 앉아서 하는

55-1 What is the main argument used by supporters of recognizing esports as a sport?

① Esports players earn a significant amount of money.

② Esports require high levels of skill, strategy, and training akin to traditional sports.

③ Anyone can participate in esports regardless of their age.

④ Esports are more entertaining to watch than many traditional sports.

⑤ The video games used in esports are technologically advanced.

55-2 Which of the following is a primary concern for those who oppose the inclusion of esports in the Olympics?

① The lack of global popularity and viewership.

② The difficulty in understanding the rules of the games.

③ The absence of significant physical activity and athleticism.

④ The high cost of equipment needed to compete.

⑤ The limited number of professional esports players.

55-3 According to the passage, what is one aspect that esports and traditional team sports share?

① The games are not owned by private corporations.

② The necessity of teamwork and communication among players.

③ The emphasis on whole-body physical fitness.

④ The risk of physical injury during competition.

⑤ A long history of inclusion in the Olympic Games.

[지문 56]

Gentrification is a complex urban phenomenon where wealthier individuals move into lower-income neighborhoods, leading to significant economic and social changes. Initially, this process can bring positive effects, such as investment in infrastructure, renovation of neglected buildings, and a decrease in crime rates. New businesses like cafes, boutiques, and art galleries may open, revitalizing the local economy and increasing property values. However, gentrification also has a significant downside. As property values and rents rise, the original, often lower-income, residents may be priced out of their own community, a process known as displacement. This can lead to the erosion of the neighborhood's original culture and social fabric, replacing it with a more homogeneous, affluent environment. Consequently, gentrification often sparks heated debates about urban development, social equity, and the right to the city, posing a difficult challenge for city planners and communities.

Vocabulary

- phenomenon 현상
- revitalizing 활력을 불어넣는
- displacement 대체, 이동
- homogeneous 동질의

56-1 What is the primary definition of gentrification provided in the passage?

① The process of building new public parks in urban areas.

② The movement of affluent people into less wealthy neighborhoods, causing change.

③ A government program aimed at reducing crime rates in cities.

④ The decline of a neighborhood due to lack of investment.

⑤ The establishment of art galleries and cafes in suburban areas.

56-2 Which of the following is mentioned as a potential positive outcome of gentrification?

① A decrease in property values.

② The preservation of the original neighborhood culture.

③ An increase in available low-income housing.

④ Investment in local infrastructure and building renovation.

⑤ A reduction in the number of local businesses.

56-3 What is the main negative consequence of gentrification discussed in the passage?

① The displacement of original residents due to rising costs.

② An increase in the local crime rate.

③ A decline in the quality of public services.

④ The closure of new businesses like boutiques.

⑤ A lack of interest from wealthier individuals.

[지문 57]

In ecology, a keystone species is a species that has a disproportionately large effect on its natural environment relative to its abundance. The presence of a keystone species is crucial for maintaining the structure and biodiversity of its ecosystem. A classic example is the sea otter in the kelp forest ecosystems of the North Pacific. Sea otters feed on sea urchins, which in turn graze on kelp. Without sea otters, the sea urchin population would explode, consuming vast amounts of kelp and destroying the kelp forests. These forests are vital habitats for a wide range of other species. By controlling the sea urchin population, sea otters indirectly ensure the survival of the entire kelp forest community. The removal of a keystone species, even if it is not the most numerous species, can trigger a "trophic cascade," leading to a dramatic and often irreversible shift in the ecosystem.

Vocabulary

- disproportionately 불균형적으로
- abundance 풍부함
- graze on ~을 뜯어먹다
- trophic cascade 영양 폭포

57-1 What is the defining characteristic of a keystone species according to the passage?

① It is the most abundant species in its ecosystem.

② It has a much larger impact on its environment than its numbers would suggest.

③ It is always a predator at the top of the food chain.

④ It can survive in any type of environment.

⑤ It directly feeds on every other species in its habitat.

57-2 According to the passage, what is the direct role of sea otters in their ecosystem?

① They plant and grow kelp forests.

② They protect other species from predators.

③ They control the population of sea urchins by eating them.

④ They are the primary food source for large marine mammals.

⑤ They clean the ocean floor by removing debris.

57-3 What would likely happen if sea otters were removed from the kelp forest ecosystem?

① The kelp forests would grow at an uncontrollable rate.

② The sea urchin population would decrease significantly.

③ The overall biodiversity of the ecosystem would decline.

④ Other predators would take the place of the sea otters.

⑤ The ecosystem would remain stable and unchanged.

[지문 58]

Behavioral economics challenges the traditional economic assumption that humans are perfectly rational decision-makers. It incorporates insights from psychology to explain why people often make choices that seem illogical. One of the most well-known concepts in this field is "loss aversion." This principle suggests that for most people, the psychological pain of losing something is twice as powerful as the pleasure of gaining something of equal value. For example, the distress of losing $100 is felt more intensely than the happiness of finding $100. This cognitive bias explains a wide range of behaviors, such as why investors hold on to losing stocks for too long, hoping to avoid realizing a loss, or why people are more motivated by penalties for failure than by rewards for success. Understanding loss aversion helps to explain real-world economic behaviors that seem irrational under the lens of classical economics, which often overlooks the powerful influence of human psychology.

Vocabulary

- incorporates 포함하다
- equivalent 동등한
- penalties 벌칙
- overlooks 간과하다

58-1 What is the main idea of the passage?

① Traditional economics is a more accurate model of human behavior than behavioral economics.

② Loss aversion is a psychological bias where the pain of a loss is felt more strongly than the pleasure of an equivalent gain.

③ People are always motivated by the potential for large financial rewards.

④ All human economic decisions are irrational and unpredictable.

⑤ Behavioral economics is primarily concerned with stock market investments.

58-2 According to the principle of loss aversion, which scenario would likely have the strongest psychological impact on a person?

① Receiving an unexpected gift worth $50.

② Earning a $50 bonus at work.

③ Finding a $50 bill on the street.

④ Getting a $50 discount on a purchase.

⑤ Having a $50 bill stolen from their wallet.

58-3 The passage suggests that traditional economics often fails to consider which factor?

① The role of supply and demand

② The importance of market equilibrium

③ The psychological biases affecting human decisions

④ The impact of government regulation

⑤ The calculation of interest rates

[지문 59]

The early 20th century marked a revolutionary shift in the art world with the rise of abstract art. This new form of expression moved away from representational art, which sought to depict reality accurately. Instead of painting recognizable objects, figures, or landscapes, abstract artists like Wassily Kandinsky and Piet Mondrian used color, shape, line, and form to create compositions that existed independently of visual references in the real world. This departure was driven by several factors. Some artists felt that the invention of photography had made the realistic depiction of the world obsolete. Others believed that abstract forms could communicate deeper spiritual truths or emotional states more directly than realistic imagery could. They aimed to evoke feelings and ideas in the viewer through the pure language of form and color, believing this to be a more universal and profound means of artistic communication.

Vocabulary

- representational 구상적인
- independently 독립적으로
- obsolete 구식의, 쓸모없게 된
- evoke 불러일으키다

59-1 What is the primary characteristic of abstract art as described in the passage?

① It exclusively uses black and white colors.

② It aims to create a perfect, realistic copy of the world.

③ It uses non-representational forms and colors to express ideas or emotions.

④ It was only popular for a very short period in the 19th century.

⑤ It was created primarily for commercial photography.

59-2 According to the passage, what was one reason artists began to create abstract art?

① They lacked the technical skill to paint realistically.

② Photography's ability to capture reality made realistic painting seem less necessary.

③ Patrons and buyers demanded a new and exciting style of art.

④ They wanted to create art that was easier for everyone to understand.

⑤ There was a shortage of traditional art supplies like oil paints.

59-3 What did abstract artists like Kandinsky hope to achieve with their work?

① To document historical events with perfect accuracy.

② To create art that looked exactly like a photograph.

③ To communicate profound emotions or spiritual ideas directly to the viewer.

④ To prove that art could be created without any skill.

⑤ To revive the artistic styles of the Renaissance.

[지문 60]

The development of autonomous weapons systems (AWS), often dubbed "killer robots," presents one of the most significant ethical dilemmas of our time. These are weapons that can independently search for, identify, and engage targets without direct human control. Proponents argue that AWS could reduce military casualties by replacing human soldiers in dangerous situations and could make decisions more quickly and rationally than humans in the chaos of battle. They suggest these systems could be programmed to adhere strictly to the laws of war, potentially reducing war crimes. However, opponents raise profound moral and ethical objections. They question whether a machine can ever make the complex, context-dependent distinction between a combatant and a civilian. There is also the critical issue of accountability: if an AWS makes a mistake and kills an innocent person, who is responsible? The programmer, the manufacturer, or the commander who deployed it? This lack of clear accountability is a major barrier to their acceptance.

Vocabulary

- autonomous 자율적인
- casualties 사상자
- adhere to ~을 준수하다
- accountability 책임

60-1 What is the primary function of an autonomous weapons system (AWS) as defined in the passage?

① To assist human soldiers in carrying equipment.

② To operate under the direct, real-time control of a human.

③ To find and attack targets without direct human intervention.

④ To negotiate peace treaties between warring nations.

⑤ To defend military bases from cyberattacks.

60-2 Which of the following is an argument IN FAVOR of using AWS, according to the passage?

① They are inexpensive to manufacture.

② They can reduce the number of human soldiers harmed in combat.

③ They eliminate the need for international laws of war.

④ They can be easily reprogrammed by enemy forces.

⑤ They make the decision to go to war easier.

60-3 What is the central ethical problem concerning AWS that opponents raise?

① The high cost of developing such advanced technology.

② The potential for these systems to become self-aware.

③ The difficulty of determining who is responsible if the system makes a fatal error.

④ The systems' inability to move quickly on the battlefield.

⑤ The fear that AWS would be less effective than human soldiers.

[지문 61]

The application of 3D printing technology in the medical field is revolutionizing patient care, particularly in the creation of custom implants and prosthetics. Traditionally, medical implants are mass-produced in standard sizes, which may not perfectly fit every patient's unique anatomy. This can lead to complications and longer recovery periods. However, 3D printing, also known as additive manufacturing, allows for the creation of patient-specific implants using data from CT scans or MRIs. Materials like titanium and biocompatible polymers are used to print everything from dental crowns to entire hip joints. This personalized approach ensures a perfect fit, which can significantly improve surgical outcomes, reduce the time a patient spends in surgery, and accelerate the healing process. The ability to create complex, porous structures also encourages better integration with the patient's own bone and tissue, promoting long-term stability and function.

Vocabulary

- prosthetics 보철
- anatomy 해부학적 구조
- biocompatible 생체 적합성의
- porous 다공성의

61-1 According to the passage, what is a primary advantage of 3D-printed medical implants over traditional ones?

① They are made from a wider variety of materials.

② They can be produced more quickly in large quantities.

③ They are designed to fit a patient's specific anatomy.

④ They are significantly less expensive to manufacture.

⑤ They completely eliminate the need for surgery.

61-2 Which of the following is NOT mentioned in the passage as a benefit of using 3D-printed implants?

① Shortened surgical time

② Faster healing process

③ Improved integration with bone and tissue

④ Reduced risk of post-surgical infection

⑤ Better long-term stability

61-3 What information is used to create patient-specific 3D-printed implants?

① General medical textbooks

② Data from CT scans or MRIs

③ The patient's genetic information

④ Manufacturer's standard design templates

⑤ Previous surgical records of similar cases

[지문 62]

To safeguard global food security and preserve agricultural biodiversity, seed banks have been established around the world. These facilities are designed for the long-term storage of seeds from a vast array of plant species. One of the most famous is the Svalbard Global Seed Vault in Norway, often called the "doomsday vault." It acts as a final backup for other seed banks globally. The vault is built deep inside a mountain in the Arctic, providing natural freezing conditions that are ideal for preserving seeds for centuries, or even millennia. By storing duplicates of seed samples from various national and regional gene banks, the Svalbard vault ensures that the genetic material of important food crops is not lost in the event of regional or global crises, such as natural disasters, war, or disease. This genetic diversity is crucial for developing new crop varieties that can adapt to changing climates and resist new pests.

Vocabulary

- safeguard 보호하다
- biodiversity 생물 다양성
- millennia 수천 년
- duplicates 복제품

62-1 What is the main purpose of the Svalbard Global Seed Vault as described in the passage?

① To conduct research on genetically modified crops.

② To serve as a primary storage facility for Norwegian farmers.

③ To act as a final backup for the world's other seed banks.

④ To sell rare seeds to international collectors.

⑤ To develop new plant species in a controlled environment.

62-2 According to the passage, why is the location of the Svalbard vault advantageous for seed preservation?

① It is easily accessible to researchers from all over the world.

② The Arctic location provides natural freezing conditions.

③ It is situated near major agricultural centers.

④ The political neutrality of the region prevents conflicts.

⑤ The mountain offers protection from solar radiation.

62-3 Which of the following is stated as a reason why preserving genetic diversity is important?

① It allows for the creation of more flavorful fruits and vegetables.

② It is essential for developing crops resistant to new challenges.

③ It helps maintain the current market price of food crops.

④ It provides a source of income for developing nations.

⑤ It is a legal requirement by international law.

[지문 63]

The proliferation of "fake news" through social media platforms has become a significant societal concern. Fake news refers to deliberately fabricated information that mimics the format of mainstream news media. Its primary goal is often to mislead the public for political or financial gain. One key mechanism behind its rapid spread is the "echo chamber" effect. Social media algorithms are designed to show users content that aligns with their existing beliefs and preferences. As a result, individuals are repeatedly exposed to information that confirms their biases, making them more susceptible to believing and sharing false stories that fit their worldview. This process is further amplified by confirmation bias, a psychological tendency for people to favor information that confirms their pre-existing beliefs. The combination of algorithmic filtering and human psychology creates a fertile ground for misinformation to flourish, eroding public trust in established institutions.

Vocabulary

- proliferation 확산
- fabricated 조작된
- susceptible ~에 취약한
- eroding 침식하는

63-1 What is the main topic of the passage?

① The history of journalism and media

② The psychological reasons people use social media

③ The mechanisms behind the spread of fake news

④ The financial benefits of creating fake news

⑤ The technical aspects of social media algorithms

63-2 According to the passage, what is the "echo chamber" effect?

① A situation where journalists only interview people who agree with them.

② The tendency for false information to be quickly debunked by experts.

③ A process where algorithms show users content that reinforces their views.

④ The physical design of newsrooms that prevents outside opinions.

⑤ A psychological disorder caused by excessive social media use.

63-3 The passage suggests that fake news spreads effectively because it often _____.**

① is created by professional journalists

② contains a small amount of true information

③ is supported by official government sources

④ aligns with people's pre-existing beliefs

⑤ is difficult to distinguish from entertainment

[지문 64]

Green marketing is a business strategy that involves promoting products or services based on their environmental benefits. The goal is to appeal to a growing segment of consumers who are environmentally conscious. This can involve modifying products to be more eco-friendly, changing production processes to reduce waste, or adopting sustainable packaging. However, the rise of green marketing has also led to a deceptive practice known as "greenwashing." Greenwashing occurs when a company spends more time and money marketing itself as environmentally friendly than it does on minimizing its environmental impact. Companies might use vague terms like "eco-friendly" or "natural" without providing evidence, or highlight one small green initiative to distract from larger, more harmful practices. This can mislead consumers who genuinely want to make sustainable choices and can damage the credibility of legitimate green marketing efforts. Therefore, it is crucial for consumers to be critical and look for specific certifications or data to verify a company's claims.

Vocabulary

- segment 부분, 조각
- deceptive 기만적인
- vague 모호한
- legitimate 합법적인, 정당한

64-1 What is the primary purpose of green marketing?

① To reduce the overall costs of production.

② To comply with government environmental regulations.

③ To attract environmentally conscious consumers.

④ To create a new market for luxury goods.

⑤ To exclusively promote non-profit organizations.

64-2 The passage defines "greenwashing" as a practice where a company _____.**

① invests heavily in truly sustainable production methods

② gives all its profits to environmental causes

③ genuinely reduces its negative impact on the environment

④ deceptively presents itself as more eco-friendly than it actually is

⑤ collaborates with competitors to improve industry standards

---

64-3 What does the author suggest consumers do to avoid being misled by greenwashing?

① Boycott all products that are marketed as "green."

② Trust only the claims made by large, well-known corporations.

③ Purchase products with the most attractive green packaging.

④ Rely solely on advertisements for product information.

⑤ Be critical and seek evidence to support environmental claims.

[지문 65]

Cubism, one of the most influential art movements of the early 20th century, fundamentally changed the course of modern art. Pioneered by Pablo Picasso and Georges Braque around 1907, Cubism challenged traditional forms of representation, such as perspective, which had been the standard since the Renaissance. Instead of depicting objects from a single, fixed viewpoint, Cubist painters portrayed their subjects from multiple viewpoints simultaneously to represent the subject in a greater context. They broke down objects into geometric forms—cubes, spheres, cylinders—and reassembled them in an abstracted way. This fragmentation allowed them to explore the complex, three-dimensional nature of reality on a flat, two-dimensional canvas. Early Cubism, known as Analytic Cubism, was characterized by a monochromatic color palette of browns and grays, focusing the viewer's attention on the underlying structure of the form rather than on color.

Vocabulary

- pioneered 개척했다
- simultaneously 동시에
- fragmentation 파편화
- monochromatic 단색의

65-1 What is the main innovation of Cubism described in the passage?

① The use of bright, vibrant colors to express emotion.

② The creation of perfectly realistic, lifelike portraits.

③ The depiction of subjects from multiple viewpoints at once.

④ The return to artistic standards of the Renaissance.

⑤ The exclusive focus on painting natural landscapes.

65-2 According to the passage, who were the pioneers of the Cubist movement?

① Vincent van Gogh and Paul Cézanne

② Claude Monet and Auguste Renoir

③ Salvador Dalí and René Magritte

④ Pablo Picasso and Georges Braque

⑤ Henri Matisse and André Derain

65-3 Which of the following is a characteristic of Analytic Cubism?

① A focus on the underlying structure of objects.

② A rich and diverse color palette.

③ The use of a single, fixed perspective.

④ The depiction of purely emotional and dreamlike states.

⑤ The creation of large-scale public sculptures.

[지문 66]

The Internet of Things (IoT) refers to the vast network of physical devices embedded with sensors, software, and other technologies for the purpose of connecting and exchanging data over the internet. While smart home devices, wearable fitness trackers, and connected cars offer unprecedented convenience, they also introduce significant security vulnerabilities. Many IoT devices are designed with a focus on functionality and low cost, often neglecting basic security measures. This can make them easy targets for hackers. A compromised device could be used to steal personal data, spy on users through cameras and microphones, or even be enlisted into a "botnet"—a network of hijacked devices used to launch large-scale cyberattacks. The sheer number and diversity of IoT devices make securing them a complex challenge. Users often fail to change default passwords or apply security updates, further exacerbating the risk. Therefore, both manufacturers and consumers share the responsibility for enhancing IoT security.

Vocabulary

- embedded 내장된
- vulnerabilities 취약점
- compromised 훼손된, 감염된
- exacerbating 악화시키는

66-1 What is the main concern regarding IoT devices discussed in the passage?

① Their high manufacturing cost

② Their lack of practical applications

③ Their significant security vulnerabilities

④ Their rapid technological obsolescence

⑤ Their high energy consumption

66-2 According to the passage, why are many IoT devices easy targets for hackers?

① They are not connected to the internet.

② They use advanced, unbreakable encryption.

③ They are often designed without basic security measures.

④ They are only used by technologically savvy individuals.

⑤ They automatically install security updates every day.

66-3 What is a "botnet" as described in the passage?

① A security software designed to protect IoT devices.

② A social network for users of smart home technology.

③ A government agency that regulates the internet.

④ A network of compromised devices used for cyberattacks.

⑤ A marketplace for buying and selling used IoT devices.

[지문 67]

The Silk Road was not merely a conduit for trade in luxury goods like silk, spices, and precious metals. It was, more profoundly, a vast network of cultural exchange that connected civilizations across Eurasia for centuries. As merchants, monks, soldiers, and nomads traveled these routes, they carried with them their ideas, religions, artistic styles, and technologies. For instance, Buddhism spread from India to China and beyond largely via the Silk Road, with missionaries and pilgrims establishing monasteries in oasis towns along the way. Similarly, artistic motifs from Greece and Rome found their way into the art of Central Asia and China, creating unique hybrid styles. Technologies such as papermaking and gunpowder, originally developed in China, were transmitted westward, eventually reaching Europe and transforming societies there. This dynamic interplay of cultures, not just the exchange of commodities, is the true legacy of the Silk Road.

Vocabulary

- merely 단지
- Eurasia 유라시아
- motifs 모티프, 주제
- commodities 상품

67-1 What does the author argue is the "true legacy" of the Silk Road?

① The economic prosperity it brought to the Roman Empire.

② The exchange of goods like silk and spices.

③ The military conquests that it facilitated.

④ The dynamic cultural exchange between civilizations.

⑤ The creation of a single, unified empire in Asia.

67-2 Which of the following is mentioned as an example of cultural transmission along the Silk Road?

① The spread of Christianity from Europe to China.

② The introduction of coffee from the Americas to Asia.

③ The spread of Buddhism from India to China.

④ The movement of democratic ideals from Greece to India.

⑤ The transfer of steelmaking technology from Europe to China.

67-3 The passage suggests that the interaction on the Silk Road resulted in _____.**

① the decline of major religions

② the creation of new, hybrid artistic styles

③ the standardization of a single language for trade

④ the frequent outbreak of wars over trade routes

⑤ the preservation of cultures in complete isolation

[지문 68]

The placebo effect is a fascinating phenomenon in which a patient experiences real health improvements after receiving a treatment with no actual therapeutic value, such as a sugar pill or a saline injection. The effect is not merely "in the mind"; it can trigger measurable physiological changes, such as the release of endorphins, the body's natural painkillers. This response is believed to be driven by the patient's beliefs and expectations about the treatment. If a person believes a pill will cure their headache, that belief itself can be powerful enough to bring about relief. For this reason, placebo-controlled trials are the gold standard in clinical research. In these studies, one group of participants receives the actual drug being tested, while a control group receives a placebo. Researchers can then determine if the new drug is effective by comparing its results to those of the placebo, ensuring that the observed benefits are due to the drug itself and not just the power of suggestion.

Vocabulary

- phenomenon 현상
- therapeutic 치료의
- physiological 생리적인
- suggestion 암시

68-1 What is the placebo effect, according to the passage?

① A negative side effect caused by a new medication.

② An allergic reaction to inactive substances like sugar.

③ A real health improvement from a treatment with no active ingredient.

④ A method for making medications taste better.

⑤ The process of testing drugs on animals before humans.

68-2 The passage states that the placebo effect can cause which physiological change?

① A decrease in body temperature

② The release of natural painkillers

③ An increase in heart rate

④ The production of new antibodies

⑤ A reduction in blood sugar levels

68-3 Why are placebo-controlled trials considered the "gold standard" in research?

① They are the cheapest and fastest way to conduct research.

② They help researchers test the effectiveness of a drug beyond the power of suggestion.

③ They guarantee that all participants in a study will be cured.

④ They allow patients to choose whether they receive the real drug or a placebo.

⑤ They are required by law for all types of scientific experiments.

[지문 69]

The concept of the "smart city" envisions urban areas where data collected from sensors, devices, and citizens is used to manage assets, resources, and services efficiently. Proponents argue that this data-driven approach can lead to significant improvements in urban life, such as optimized traffic flow, reduced energy consumption, and more responsive public services. For example, smart traffic lights could adjust their timing based on real-time traffic data to reduce congestion, while smart grids could manage electricity distribution more effectively. However, the implementation of smart cities also raises serious concerns about data privacy and surveillance. The vast amount of data collected—from transportation patterns to public space usage—could potentially be misused by corporations or governments. Critics worry that without robust regulations and transparent policies, smart cities could evolve into environments of constant monitoring, eroding personal freedoms. Striking a balance between technological efficiency and the protection of individual privacy is the primary challenge for the future of urban development.

Vocabulary

- envisions 구상하다
- proponents 지지자들
- robust 견고한
- eroding 침식하는

69-1 According to the passage, what is the main goal of a smart city?

① To increase the population of urban areas.

② To use data for the efficient management of city services.

③ To replace all public services with automated systems.

④ To encourage citizens to move to rural areas.

⑤ To create more public parks and green spaces.

69-2 Which of the following is mentioned as a potential benefit of a smart city?

① Lower housing costs

② Elimination of all crime

③ Optimized traffic flow

④ Increased citizen participation in politics

⑤ Free public transportation for all residents

69-3 What is the primary challenge for the future of smart cities mentioned in the passage?

① The high cost of installing sensors everywhere.

② The lack of technology to analyze the collected data.

③ The public's resistance to new technologies.

④ Finding enough skilled workers to manage the systems.

⑤ Balancing efficiency with the protection of privacy.

[지문 70]

The Sapir-Whorf hypothesis, also known as the principle of linguistic relativity, proposes a fascinating link between the language we speak and the way we perceive the world. The strong version of the hypothesis, linguistic determinism, suggests that language entirely determines our thought processes and cognitive categories. According to this view, people who speak different languages live in fundamentally different thought-worlds. However, most modern linguists have rejected this strong version as it is too rigid and lacks sufficient evidence. Instead, they favor a weaker version, linguistic relativity, which posits that language influences, but does not strictly determine, our thinking and perception. For example, a language that has many different words for shades of blue might make its speakers more adept at distinguishing between them. This suggests that while our native language may shape our worldview and focus our attention on certain aspects of reality, it does not imprison our minds.

Vocabulary

- posits 상정하다
- rejected 거부된
- adept 능숙한
- imprison 가두다

70-1 What is the central idea of the Sapir-Whorf hypothesis?

① All languages share a universal, underlying grammar.

② The language one speaks is linked to how one perceives reality.

③ Learning a new language can improve one's memory.

④ The complexity of a language reflects the intelligence of its speakers.

⑤ Language is a purely biological instinct, not a cultural tool.

70-2 What is the main difference between the strong and weak versions of the hypothesis?

① The strong version applies only to ancient languages, while the weak version applies to modern ones.

② The strong version focuses on written language, while the weak version focuses on spoken language.

③ The strong version claims language determines thought, while the weak version claims it only influences thought.

④ The strong version was proposed by Sapir, while the weak version was proposed by Whorf.

⑤ The strong version is widely accepted today, while the weak version has been rejected.

70-3 According to the passage, why have most modern linguists rejected the strong version of the hypothesis?

① It is too complex to be understood by non-linguists.

② It was proven to be a form of cultural discrimination.

③ It contradicts the principles of human evolution.

④ It is considered too rigid and is not supported by enough evidence.

⑤ It only explains the structure of European languages.

[지문 71]

The debate over the optimal age to begin second language instruction is a central topic in educational psychology. Proponents of early exposure often cite the "critical period hypothesis," which suggests that the brain is more receptive to language acquisition during childhood. This neuroplasticity allows young learners to acquire native-like pronunciation and intuitive grammatical understanding more easily than adults. Furthermore, early bilingualism has been linked to enhanced cognitive abilities, such as improved problem-solving skills and greater mental flexibility. However, some educators express concerns about potential cognitive overload, arguing that introducing a second language too early might interfere with the development of the child's native tongue. They also point out that the success of early language programs heavily depends on the quality of instruction and the amount of exposure, which can be inconsistent. A balanced approach, considering individual readiness and pedagogical quality, is often recommended.

Vocabulary

- optimal 최적의
- receptive 수용적인
- cognitive overload 인지 과부하
- pedagogical 교육학의

71-1 What is the main topic of the passage?

① The superiority of adult language learners

② The neurological basis of language acquisition

③ The pros and cons of early second language education

④ The role of parental involvement in bilingualism

⑤ The history of the critical period hypothesis

71-2 According to the passage, what is a potential cognitive benefit of early bilingualism?

① Better long-term memory

② Faster reading speed in the native language

③ Increased emotional intelligence

④ Enhanced mental flexibility

⑤ Superior mathematical skills

71-3 Which of the following is mentioned as a concern regarding early second language instruction?

① The high financial cost of bilingual programs

② The risk of confusing the child's cultural identity

③ The possibility of hindering native language development

④ The lack of standardized tests for young learners

⑤ The negative impact on social skills

[지문 72]

Chronic stress exerts a profound and often detrimental influence on the human immune system. When the body perceives a threat, it releases a cascade of hormones, including cortisol, often called the "stress hormone." In the short term, cortisol can be beneficial, suppressing inflammation and conserving energy for a fight-or-flight response. However, when stress becomes chronic, persistently high levels of cortisol can have the opposite effect. They can suppress the effectiveness of the immune system by lowering the number of lymphocytes, the white blood cells that help fight off infection. This immunosuppression makes the body more vulnerable to pathogens, leading to an increased frequency of colds and other infections. Furthermore, chronic stress can exacerbate autoimmune diseases and prolong wound healing, demonstrating its far-reaching impact on overall health.

Vocabulary

- detrimental 해로운
- suppressing 억제하는
- lymphocytes 림프구
- exacerbate 악화시키다

72-1 What is the primary function of cortisol during a short-term stress response, according to the passage?

① To increase the number of lymphocytes

② To suppress inflammation

③ To enhance the immune system immediately

④ To promote long-term health

⑤ To accelerate wound healing

72-2 According to the passage, what is a major consequence of long-term elevated cortisol levels?

① A strengthened immune response

② A reduced risk of autoimmune diseases

③ A decreased vulnerability to infections

④ A lower count of essential white blood cells

⑤ An improved ability to handle future stress

72-3 Which of the following statements can be inferred from the passage?

① Stress is always harmful to the human body.

② The body's response to short-term and long-term stress is fundamentally different.

③ Cortisol is the only hormone involved in the stress response.

④ People with chronic stress heal from injuries more quickly.

⑤ The immune system is not affected by psychological states.

[지문 73]

The democracy of ancient Athens is often lauded as a foundational pillar of Western civilization, yet its practice had significant limitations. Athenian democracy was direct, meaning citizens voted on legislation and executive bills in their own right, rather than through elected representatives. This system fostered a high degree of political engagement among its participants. However, the concept of "citizen" was narrowly defined. Participation was restricted to a small fraction of the population: adult, male citizens who had completed their military training. Women, slaves, and metics (foreign residents) were completely excluded from the political process, despite constituting the vast majority of the city-state's population. Therefore, while innovative for its time, Athenian democracy was far from the inclusive, universal system that the term implies today. It was a democracy for a privileged few, not for all.

Vocabulary

- lauded 칭송받는
- fostered 조성했다
- metics 거류 외국인
- constituting 구성하는

73-1 What was a defining characteristic of the political system in ancient Athens?

① The election of representatives to a parliament

② The direct participation of citizens in lawmaking

③ The inclusion of all residents in political life

④ The separation of powers between executive and legislative branches

⑤ The rule of a monarch advised by a council of citizens

73-2 According to the passage, who was NOT allowed to participate in Athenian democracy?

① Male citizens over the age of 30

② Citizens who owned property

③ Men who had finished military service

④ Foreign residents living in Athens

⑤ Adult males born in Athens

73-3 What does the passage suggest about Athenian democracy?

① It was a more advanced system than modern democracies.

② It failed because of a lack of citizen participation.

③ It was an exclusive system that benefited a minority of the population.

④ It gave equal political rights to men and women.

⑤ It was primarily designed to manage foreign relations.

[지문 74]

Metaphors are not merely poetic flourishes; they are fundamental to how we conceptualize the world and structure our thoughts. Linguists George Lakoff and Mark Johnson argue that our conceptual system is largely metaphorical. A prime example is the "argument is war" metaphor. This conceptual metaphor shapes not only our language but also our actions. We speak of "winning" or "losing" an argument, "attacking" an opponent's weak points, "defending" our own position, and "shooting down" someone's ideas. This framework encourages an adversarial approach to discourse. If we were to conceptualize argument as a dance, our language and behavior would change dramatically. We might talk about partners, rhythm, and creating something beautiful together. This illustrates that the metaphors we live by can define our realities, channeling our perceptions and actions in specific, often unconscious, ways.

Vocabulary

- flourishes 수사적 표현
- conceptualize 개념화하다
- adversarial 적대적인
- discourse 담론

74-1 What is the main argument of the passage?

① Metaphors are primarily used in literature and poetry.

② The "argument is war" metaphor is universally understood.

③ Metaphors are essential tools that shape human thought and reality.

④ Language would be more precise without the use of metaphors.

⑤ Conceptualizing argument as a dance is more effective than as a war.

74-2 According to the passage, which phrase is a linguistic product of the "argument is war" metaphor?

① "Let's explore this idea together."

② "I see your point of view."

③ "He shot down my entire proposal."

④ "We are in step with each other."

⑤ "That's a balanced perspective."

74-3 The passage implies that if we thought of "argument as a dance," our approach to discussion would likely become more...**

① Aggressive

② Collaborative

③ Illogical

④ Competitive

⑤ Silent

[지문 75]

The positive impact of physical exercise on mental health is well-documented and extends beyond simple mood elevation. Regular physical activity triggers the release of endorphins, which are the body's natural painkillers and mood elevators, often leading to a feeling of euphoria known as a "runner's high." But the benefits are more complex. Exercise also increases the brain's concentration of neurotransmitters like serotonin and dopamine, which are crucial for mood regulation and are often targeted by antidepressant medications. Furthermore, physical activity can serve as a form of meditation in action, helping to interrupt the flow of negative thoughts and worries that fuel anxiety and depression. By focusing on body movement, individuals can gain a sense of agency and self-efficacy, which boosts self-esteem and resilience against stress. This combination of neurochemical and psychological effects makes exercise a powerful tool for maintaining mental well-being.

Vocabulary

- elevation 상승
- euphoria 행복감
- neurotransmitters 신경전달물질
- agency 주체성

75-1 What is the primary purpose of the passage?

① To compare different types of physical exercise

② To explain the mechanisms through which exercise benefits mental health

③ To advertise the use of antidepressant medications

④ To describe the phenomenon of a "runner's high"

⑤ To recommend a specific workout routine for stress relief

75-2 Which substance mentioned in the passage is described as one of the body's natural painkillers?

① Dopamine

② Serotonin

③ Cortisol

④ Endorphins

⑤ Lymphocytes

75-3 According to the passage, how can exercise function as a form of "meditation in action"?

① By increasing the heart rate to a target zone

② By requiring intense focus on a competitive goal

③ By helping to divert attention from negative thought patterns

④ By promoting social interaction in a group setting

⑤ By releasing hormones that induce a state of sleep

[지문 76]

"Rewilding" is an ambitious conservation strategy that aims to restore ecosystems to their natural, self-regulating state. Unlike traditional conservation, which often focuses on preserving specific species in isolation, rewilding seeks to reinstate entire ecosystems. A core principle of this approach is the reintroduction of keystone species—animals or plants that have a disproportionately large effect on their natural environment relative to their abundance. The reintroduction of wolves to Yellowstone National Park is a classic example. The wolves, as apex predators, controlled the elk population, which in turn allowed overgrazed vegetation like willow and aspen to recover. This vegetation change then provided habitats for beavers and songbirds, demonstrating a cascading effect throughout the ecosystem. Rewilding, therefore, is about letting nature take care of itself by restoring its key components and reducing human intervention.

Vocabulary

- ambitious 야심찬
- reinstate 복원하다
- apex predators 최상위 포식자
- intervention 개입

76-1 What is the main objective of the rewilding strategy described in the passage?

① To create more national parks for tourism

② To focus on the preservation of a single endangered species

③ To restore the natural functions of an entire ecosystem

④ To study the behavior of apex predators in captivity

⑤ To increase human management of wilderness areas

76-2 According to the passage, what is a "keystone species"?

① The most abundant species in an ecosystem

② A species that has a significant impact on its environment

③ A species that has been newly discovered by scientists

④ A species that is kept in a zoo for conservation

⑤ The first species to be reintroduced into a habitat

76-3 What was a direct result of reintroducing wolves to Yellowstone Park?

① A decrease in the songbird population

② The disappearance of beaver populations

③ An increase in human intervention in the park

④ The recovery of vegetation previously eaten by elk

⑤ The extinction of the local elk population

[지문 77]

The concept of the "digital divide" has evolved significantly. Initially, it referred simply to the gap between those who had access to computers and the internet and those who did not. While this access gap still exists, particularly between developed and developing nations, the term now encompasses a more complex set of inequalities. The modern understanding of the digital divide includes the "skills gap"—the disparity in individuals' ability to use digital technologies effectively. Merely having access to a device is insufficient if one lacks the digital literacy to find reliable information, protect one's privacy, or use online services for education and employment. This second-level divide often correlates with socioeconomic status and education level, creating a cycle where those who are already disadvantaged fall further behind in an increasingly digital world. Bridging this divide now requires not just providing infrastructure, but also investing in comprehensive digital literacy education.

Vocabulary

- evolved 진화했다
- encompasses 포함하다
- disparity 격차
- correlates with ~와 상관관계가 있다

77-1 How has the definition of the "digital divide" changed over time?

① It has narrowed to only include the gap between nations.

② It has expanded from just access to include digital skills.

③ It now focuses exclusively on the cost of internet services.

④ It has become irrelevant due to widespread internet access.

⑤ It refers only to the difference in internet connection speeds.

77-2 Besides the lack of physical access to the internet, what is another major component of the modern digital divide?

① The preference for traditional media

② A lack of interest in technology

③ The disparity in digital literacy and skills

④ The high cost of software updates

⑤ The physical distance from internet servers

77-3 What is a potential consequence of the "skills gap" mentioned in the passage?

① It helps to equalize opportunities for everyone.

② It primarily affects people in developed countries.

③ It forces governments to lower the cost of technology.

④ It can worsen existing socioeconomic disadvantages.

⑤ It encourages more people to learn traditional trades.

[지문 78]

Behavioral economics challenges the traditional economic assumption that humans are perfectly rational decision-makers. A cornerstone of this field is the concept of "loss aversion," first identified by psychologists Daniel Kahneman and Amos Tversky. Loss aversion describes the human tendency to feel the pain of a loss more powerfully than the pleasure of an equivalent gain. For instance, the emotional impact of losing $100 is generally much greater than the positive feeling of finding $100. This cognitive bias has significant implications for financial behavior. It can explain why investors hold on to losing stocks for too long, hoping to avoid realizing a loss, while selling winning stocks too early to lock in a gain. Understanding loss aversion helps to explain real-world economic behaviors that seem irrational under the lens of classical economics, which often overlooks the powerful influence of human psychology.

Vocabulary

- assumption 가정
- tendency 경향
- lock in ~을 확보하다, 고정시키다
- overlooks 간과하다

78-1 What is the central concept discussed in the passage?

① The rationality of human economic choices

② The psychological principle of loss aversion

③ The careers of Kahneman and Tversky

④ Strategies for investing in the stock market

⑤ The difference between behavioral and classical psychology

78-2 According to the principle of loss aversion, which scenario would have the strongest emotional impact on a person?

① Receiving an unexpected gift of $50

② Earning a $50 bonus at work

③ Finding a $50 bill on the street

④ Winning $50 in a lottery

⑤ Losing a $50 bill from one's wallet

78-3 The passage suggests that traditional economics often fails to consider which factor?

① The role of supply and demand

② The importance of market equilibrium

③ The psychological biases affecting human decisions

④ The impact of government regulation

⑤ The calculation of interest rates

[지문 79]

The Impressionist movement, which emerged in France in the late 19th century, represented a radical departure from the established traditions of academic art. The French Academy, which dominated the art world at the time, prized polished finishes, historical subjects, and carefully constructed compositions. In stark contrast, Impressionist painters like Claude Monet and Camille Pissarro sought to capture the fleeting, sensory effect of a moment—the "impression." They moved their studios outdoors, a practice known as *en plein air*, to observe the changing effects of light and atmosphere directly. Their technique was characterized by visible brushstrokes, unblended colors, and an emphasis on light in its shifting qualities. Initially mocked by critics for its seemingly unfinished and sketchy appearance, Impressionism ultimately revolutionized Western art by challenging conventional notions of realism and paving the way for modern art.

Vocabulary

- prized 소중히 여겼다
- fleeting 덧없는
- mocked 조롱받았다
- sketchy 대충 그린 듯한

79-1 What was a primary objective for Impressionist painters?

① To create highly detailed and realistic portraits

② To depict grand historical and mythological scenes

③ To capture the immediate and transient effects of light

④ To follow the strict rules set by the French Academy

⑤ To paint exclusively within their indoor studios

79-2 Which of the following is described as a characteristic technique of Impressionism?

① Smooth, invisible brushwork

② A dark and somber color palette

③ Painting subjects from memory

④ The use of distinct, visible brushstrokes

⑤ A focus on creating perfectly balanced compositions

79-3 How did Impressionism differ from the academic art of its era?

① Academic art was more popular with the general public.

② Impressionism focused on outdoor scenes and changing light, while academic art favored studio work and historical themes.

③ Impressionist painters used more traditional techniques.

④ Academic artists were the first to paint *en plein air*.

⑤ Impressionism was immediately celebrated by art critics.

[지문 80]

The Mediterranean diet is not a structured diet plan but rather a style of eating inspired by the traditional cuisines of countries bordering the Mediterranean Sea, such as Greece and Italy. Its foundation is built upon plant-based foods: an abundance of fruits, vegetables, whole grains, legumes, and nuts. The primary source of fat in this diet is olive oil, which is rich in monounsaturated fats. The diet also includes moderate consumption of fish and poultry, while red meat and dairy products are eaten less frequently. Numerous scientific studies have linked this dietary pattern to significant health benefits. It is strongly associated with a lower risk of cardiovascular disease, as it helps to reduce blood pressure and "bad" LDL cholesterol. Furthermore, adherence to the Mediterranean diet has been correlated with increased longevity and a reduced incidence of certain cancers and neurodegenerative diseases like Alzheimer's.

Vocabulary

- legumes 콩류
- monounsaturated 단일 불포화의
- longevity 장수
- incidence 발생률

80-1 What is the main subject of the passage?

① A comparison of Greek and Italian cuisines

② The economic impact of olive oil production

③ The components and health benefits of the Mediterranean diet

④ A guide to losing weight quickly and effectively

⑤ The history of food preservation in Mediterranean countries

80-2 Which of the following is considered a cornerstone of the Mediterranean diet?

① Frequent consumption of red meat

② The use of butter as the primary fat

③ A high intake of processed foods

④ A reliance on plant-based foods and olive oil

⑤ Daily consumption of high-fat dairy products

80-3 According to the passage, what is a major health advantage associated with the Mediterranean diet?

① A guaranteed prevention of all cancers

② A rapid increase in muscle mass

③ A reduced risk of heart and blood vessel diseases

④ The complete elimination of cholesterol from the body

⑤ An improved ability to digest dairy products

[지문 81]

Ion thrusters represent a highly efficient form of electric propulsion for spacecraft. Unlike traditional chemical rockets that provide powerful but short-lived thrust by burning fuel, ion thrusters work on a different principle. They use electricity, often generated by solar panels, to ionize a neutral gas, typically xenon. This process strips electrons from the gas atoms, creating positively charged ions. These ions are then accelerated by a strong electrostatic field and expelled at extremely high speeds, generating a gentle but continuous thrust. While the force produced at any given moment is very small—often compared to the weight of a sheet of paper—its constant application over months or years allows a spacecraft to reach very high velocities. This makes ion thrusters ideal for long-duration, deep-space missions where fuel efficiency is more critical than raw power.

Vocabulary

- propulsion 추진
- ionize 이온화하다
- electrostatic 정전기의
- expelled 방출된

81-1 What is the primary advantage of an ion thruster compared to a chemical rocket?

① It can generate a much more powerful initial burst of speed.

② It uses a more common and cheaper type of fuel.

③ It is significantly more fuel-efficient for long-term missions.

④ It does not require electricity from solar panels to operate.

⑤ It can be used for both atmospheric and space travel.

81-2 Which of the following is NOT a step in the operation of an ion thruster as described in the passage?

① A neutral gas like xenon is used as a propellant.

② Electricity is used to strip electrons from atoms.

③ A chemical reaction is used to burn the fuel for thrust.

④ Positively charged ions are created from the gas.

⑤ An electrostatic field accelerates the ions.

81-3 According to the passage, for which type of mission are ion thrusters most suitable?

① Short-distance trips to the Moon.

② Launching heavy satellites into Earth's orbit.

③ Rapidly maneuvering a spacecraft to avoid debris.

④ Missions requiring exploration of deep space over a long period.

⑤ Landing probes on planets with strong gravity.

[지문 82]

The transition to a world powered by renewable energy sources like solar and wind is a critical step in combating climate change. However, these sources face a significant challenge: intermittency. The sun does not shine at night, and the wind does not blow constantly, leading to fluctuations in power generation. To ensure a stable and reliable energy supply, this issue must be addressed. One of the most promising solutions is the development of large-scale energy storage systems. Advanced batteries, such as lithium-ion grids, can store excess energy produced during sunny or windy periods and release it when generation is low. Another method is pumped-hydro storage, which uses surplus electricity to pump water to a higher reservoir, later releasing it to generate power. Furthermore, the implementation of "smart grids" can help manage energy consumption by intelligently balancing supply and demand across the network.

Vocabulary

- intermittency 간헐성
- fluctuations 변동
- reservoir 저수지
- intelligently 지능적으로

82-1 What is the main problem associated with solar and wind power as mentioned in the passage?

① They are more expensive than traditional energy sources.

② Their power generation is inconsistent and unpredictable.

③ They require a large amount of land to be effective.

④ The technology for them is not yet fully developed.

⑤ They produce harmful byproducts during operation.

82-2 Which of the following is presented in the passage as a way to solve the problem of intermittency?

① Reducing overall energy consumption globally.

② Building more fossil fuel power plants as backup.

③ Using systems that can store energy for later use.

④ Moving energy production facilities to sunnier and windier locations.

⑤ Relying solely on one type of renewable energy.

82-3 What can be inferred about the function of a "smart grid"?

① It generates its own renewable energy.

② It primarily relies on pumped-hydro storage.

③ It helps to efficiently manage the flow of electricity.

④ It is a type of advanced battery technology.

⑤ It works by predicting weather patterns.

[지문 83]

Multicultural societies, where people from diverse ethnic and cultural backgrounds coexist, are becoming increasingly common in our globalized world. This diversity can enrich a society, bringing a wide range of perspectives, traditions, and skills. However, it also presents unique challenges. Cultural friction can arise from differences in language, social norms, religious beliefs, and values. These misunderstandings can sometimes lead to social tension and segregation if not managed properly. Therefore, achieving successful integration is more complex than simply promoting tolerance. It requires proactive efforts from both the host society and immigrant communities. Key strategies include implementing inclusive public policies, providing cross-cultural education in schools, and creating shared public spaces that encourage interaction and dialogue. Fostering mutual respect and understanding is essential for building a cohesive and harmonious multicultural society.

Vocabulary

- coexist 공존하다
- friction 마찰
- segregation 분리
- cohesive 응집력 있는

83-1 According to the passage, what is a potential difficulty in multicultural societies?

① A decline in economic productivity.

② The loss of the host country's original culture.

③ Conflict resulting from different customs and beliefs.

④ A lack of diverse skills and perspectives.

⑤ The refusal of immigrants to learn the new language.

83-2 The passage suggests that true integration in a multicultural society requires what?

① Immigrants to completely abandon their own culture.

② The host society to enforce its norms on newcomers.

③ Active measures to foster mutual understanding.

④ Keeping different cultural groups separate to avoid conflict.

⑤ Focusing only on the economic benefits of diversity.

83-3 Which of the following is NOT mentioned as a method for promoting harmony?

① Creating spaces for different groups to interact.

② Educating students about different cultures.

③ Establishing policies that are inclusive of all groups.

④ Encouraging one group's values to become dominant.

⑤ Fostering dialogue between communities.
